

**Vendor:** Avaya

**Exam Code:** 3102

**Exam Name:** Avaya Aura Session Manager and System Manager Implementation and Maintenance Exam

**Version:** DEMO

1. Company XYZ has a multi-location voice network. They have Session Manager at their main site and Avaya Communication Manager (CM) and Cisco Call Manager at their branch locations. Which type of messages does Session Manager send to the Avaya and Cisco PBX configured as SIP Entities to monitor their status?

- A. ENTITY
- B. LINK
- C. OPTIONS
- D. STATUS

**Answer: C**

2. When performing a remote backup of system Manager data the administrator is asked for a user name and password.

Which statement best explains why a user name and password are required.?

- A. The backed-up data file is encrypted. The username and password are used in encryption process and subsequently to access the file on restoring backed up data.
- B. The backed-up data is stored on a remote server using SCP. The user name and password are used to login remote server.
- C. Because System Manager Data is being exported from the server for security and authentication purpose system Manager once again checks the administrator's credentials.
- D. All System Manager Data is backed up to common storage repository setup during installation. For system Manager to access the repository the correct user name and password must be supplied.

**Answer: B**

3. Which URL should be used to access the web console to install a System Manager template?

- A. <https://135.0.0.5/webconsole>
- B. <https://135.0.0.6/webconsole>
- C. <https://135.0.0.7/SMGR>
- D. <https://135.0.0.7/webconsole>

**Answer: C**

4. After a power failure or database crash, the Postgres database may become corrupted and the Postgres server may not restart.

The recovery action is to clear the writer-Ahead Log (WAL) and optionally reset other control data, using which command?

- A. `pg_resetxlog`
- B. `pg_clearwal`
- C. `pg_dump`
- D. `service postgresql restart`
- E. `service wall restart`

**Answer: A**

5. Review the output of the command shown in the exhibit.

Which command is used to generate these results and what does it tell you?

- A. swversion displays the Session ManagerReleaseinformation.
- B. statapp displays the current status of the Session Manager services.
- C. initDRS displays the Session ManagerNoderegistration and data replication.
- D. traceSM displays a ladder trace of the SIP requests going in and out of the Session Manager.
- E. smconfig displays the network information and status the Session Manager.

**Answer: E**

6. During a post-installation check of System Manager and Session Manager you discover that the Session layer replica node is stuck at "Synchronizing". You run the initTM command in Session Manager but the replication status does not change.

Which step will be effective in resolving the problem?

- A. Reset the enrollment password.
- B. Run traceSM to monitor the synchronization events and restart the Security Module.
- C. Delete the Session Manager Replica node in System Manager, verify the enrollment password is valid In System Manager and run the initTM command again in Session Manager.
- D. Verify the enrollment password is valid in System Manager and run the initTM command again in Session Manager.

**Answer: D**

7. Which three types of handles can be selected for a user when creating users in system manger? (Choose three.)

- A. SMTP
- B. H.323
- C. IBM
- D. XMPP
- E. undefined

**Answer: A,C,D**
