

Vendor: Cisco

Exam Code: 350-201

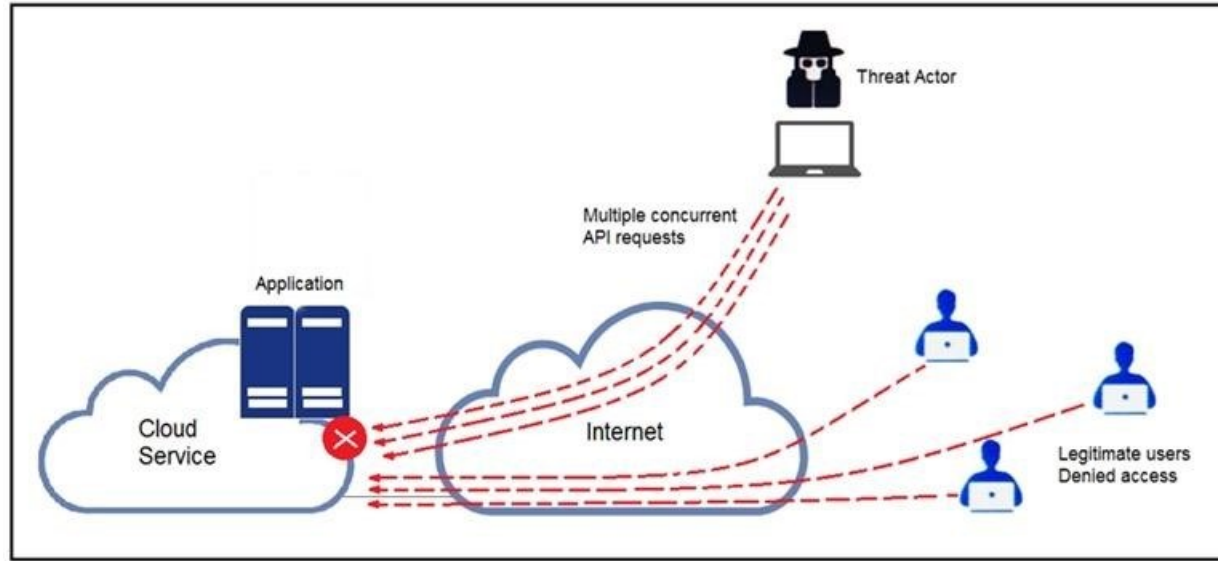

Exam Name: Performing CyberOps Using Core Security Technologies (CBRCOR) Exam

Version: Demo

Exam A

QUESTION 1

Refer to the exhibit. A threat actor behind a single computer exploited a cloud-based application by sending multiple concurrent API requests. These requests made the application unresponsive. Which solution protects the application from being overloaded and ensures more equitable application access across the end-user community?

- A. Limit the number of API calls that a single client is allowed to make
- B. Add restrictions on the edge router on how often a single client can access the API
- C. Reduce the amount of data that can be fetched from the total pool of active clients that call the API. Increase the application cache of the total pool of active clients that call the API

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 2

DRAG DROP

An organization lost connectivity to critical servers, and users cannot access business applications and internal websites. An engineer checks the network devices to investigate the outage and determines that all devices are functioning. Drag and drop the steps from the left into the sequence on the right to continue investigating this issue. Not all options are used.

Select and Place:

Correct Answer:

Section: (none)

Explanation

Explanation/Reference:

QUESTION 3

A threat actor attacked an organization's Active Directory server from a remote location, and in a thirty-minute timeframe, stole the password for the administrator account and attempted to access 3 company servers. The threat actor successfully accessed the first server that contained sales data, but no files were downloaded. A second server was also accessed that contained marketing information and 11 files were downloaded. When the threat actor accessed the third server that contained corporate financial data, the session was disconnected, and the administrator's account was disabled. Which activity triggered the behavior analytics tool?

- A. accessing the Active Directory server
- B. accessing the server with financial data
- C. accessing multiple servers
- D. downloading more than 10 files

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 4

Refer to the exhibit. A security analyst needs to investigate a security incident involving several suspicious connections with a possible attacker. Which tool should the analyst use to identify the source IP of the offender?

TCP	192.168.1.8:54580	vk-in-f108:imaps	ESTABLISHED
TCP	192.168.1.8:54583	132.245.61.50:https	ESTABLISHED

Refer to the exhibit. Cisco Advanced Malware Protection installed on an end-user desktop has automatically submitted a low prevalence file to the Threat Grid analysis engine for further analysis. What should be concluded from this report?

- A. The prioritized behavioral indicators of compromise do not justify the execution of the “ransomware” because the scores do not indicate the likelihood of malicious ransomware.
- B. The prioritized behavioral indicators of compromise do not justify the execution of the “ransomware” because the scores are high and do not indicate the likelihood of malicious ransomware.
- C. The prioritized behavioral indicators of compromise justify the execution of the “ransomware” because the scores are high and indicate the likelihood that malicious ransomware has been detected.
- D. The prioritized behavioral indicators of compromise justify the execution of the “ransomware” because the scores are low and indicate the likelihood that malicious ransomware has been detected.

QUESTION 7

A new malware variant is discovered hidden in pirated software that is distributed on the Internet. Executives have asked for an organizational risk assessment. The security officer is given a list of all assets. According to NIST, which two elements are missing to calculate the risk assessment? (Choose two.)

- A. incident response playbooks
- B. asset vulnerability assessment
- C. report of staff members with asset relations
- D. key assets and executives
- E. malware analysis report

Correct Answer: BE

Section: (none)

QUESTION 9

<p>Vulnerability #1</p> <p>A vulnerability in the Command Line Interpreter (CLI) of ACME Super Firewall (all models) could allow an attacker to execute a command which would overflow a buffer in memory. In order to carry out this attack, the attacker needs to fulfill all of the following conditions:</p> <p>a) Be logged in to the device over telnet or SSH, or through the local console b) Be logged in as a high-privileges administrative user</p> <p>In order to trigger the vulnerability, the attacker has to execute a command on the device and supply a specially crafted argument to such command. Once the command is executed, an internal stack-based buffer overflow will be triggered. This buffer overflow may lead to code execution within the process space of the CLI parser, or may crash the device.</p> <p>All software versions are affected Fixes are available now There are no workarounds or mitigations</p>	<p>Vulnerability #2</p> <p>A vulnerability in the web-based management interface of the ACME Big Router models 1010 and 1020 could allow an attacker to bypass authorization checks and then access sensitive information on the device, modify the device's configuration, impact the availability of the system, create administrative level and regular level users on the device. In order to exploit this vulnerability, the attacker needs to:</p> <p>a) Be able to reach port 80/tcp on an affected device b) The web-based management interface needs to be enabled on the device</p> <p>The attacker would then need to send a specially formed HTTP request to the web-based management interface of an affected system. The attacker does not need to log-in to the device before launching the attack.</p> <p>All software versions are affected There are no fixes available now Customers can disable the web-based management interface to prevent exploitation. Customers will still be able to manage, configure and monitor the device by using the Command Line Interface (CLI), but with reduced capabilities for monitoring.</p>
--	---

Refer to the exhibit. How must these advisories be prioritized for handling?

- A. The highest priority for handling depends on the type of institution deploying the devices
- B. Vulnerability #2 is the highest priority for every type of institution
- C. Vulnerability #1 and vulnerability #2 have the same priority
- D. Vulnerability #1 is the highest priority for every type of institution

Correct Answer: D
Section: (none)

QUESTION 13

A payroll administrator noticed unexpected changes within a piece of software and reported the incident to the incident response team. Which actions should be taken at this step in the incident response workflow?

- A. Classify the criticality of the information, research the attacker's motives, and identify missing patches
- B. Determine the damage to the business, extract reports, and save evidence according to a chain of custody
- C. Classify the attack vector, understand the scope of the event, and identify the vulnerabilities being exploited
- D. Determine the attack surface, evaluate the risks involved, and communicate the incident according to the escalation plan

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 14 A company recently completed an internal audit and discovered that there is CSRF vulnerability in 20 of its hosted applications. Based on the audit, which recommendation should an engineer make for patching?

- A. Identify the business applications running on the assets
- B. Update software to patch third-party software
- C. Validate CSRF by executing exploits within Metasploit
- D. Fix applications according to the risk scores

Correct Answer: D

Section: (none)

QUESTION 17

An organization had a breach due to a phishing attack. An engineer leads a team through the recovery phase of the incident response process. Which action should be taken during this phase?

- A. Host a discovery meeting and define configuration and policy updates
- B. Update the IDS/IPS signatures and reimage the affected hosts
- C. Identify the systems that have been affected and tools used to detect the attack
- D. Identify the traffic with data capture using Wireshark and review email filters

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 18

An engineer is going through vulnerability triage with company management because of a recent malware outbreak from which 21 affected assets need to be patched or remediated. Management decides not to prioritize fixing the assets and accepts the vulnerabilities. What is the next step the engineer should take?

- A. Investigate the vulnerability to prevent further spread
- B. Acknowledge the vulnerabilities and document the risk
- C. Apply vendor patches or available hot fixes
- D. Isolate the assets affected in a separate network

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 19

The incident response team receives information about the abnormal behavior of a host. A malicious file is found being executed from an external USB flash drive. The team collects and documents all the necessary evidence from the computing resource. What is the next step?

- A. Conduct a risk assessment of systems and applications
- B. Isolate the infected host from the rest of the subnet
- C. Install malware prevention software on the host
- D. Analyze network traffic on the host's subnet

Correct Answer: B

Section: (none)

QUESTION 24

An organization is using a PKI management server and a SOAR platform to manage the certificate lifecycle. The SOAR platform queries a certificate management tool to check all endpoints for SSL certificates that have either expired or are nearing expiration. Engineers are struggling to manage problematic certificates outside of PKI management since deploying certificates and tracking them requires searching server owners manually. Which action will improve workflow automation?

- A. Implement a new workflow within SOAR to create tickets in the incident response system, assign problematic certificate update requests to server owners, and register change requests.
- B. Integrate a PKI solution within SOAR to create certificates within the SOAR engines to track, update, and monitor problematic certificates.
- C. Implement a new workflow for SOAR to fetch a report of assets that are outside of the PKI zone, sort assets by certification management leads and automate alerts that updates are needed.
- D. Integrate a SOAR solution with Active Directory to pull server owner details from the AD and send an automated email for problematic certificates requesting updates.

Correct Answer: C

QUESTION 29

A patient views information that is not theirs when they sign in to the hospital's online portal. The patient calls the support center at the hospital but continues to be put on hold because other patients are experiencing the same issue. An incident has been declared, and an engineer is now on the incident bridge as the CyberOps Tier 3 Analyst. There is a concern about the disclosure of PII occurring in real-time. What is the first step the analyst should take to address this incident?

- A. Evaluate visibility tools to determine if external access resulted in tampering
- B. Contact the third-party handling provider to respond to the incident as critical
- C. Turn off all access to the patient portal to secure patient records
- D. Review system and application logs to identify errors in the portal code

Correct Answer: C

Reference: <https://www.ccexpert.us/pix-firewall/ip-verify-reversepath-command.html>

QUESTION 35

Refer to the exhibit. An engineer is analyzing this Vlan0386-int12-117.pcap file in Wireshark after detecting a suspicious network activity. The origin header for the direct IP connections in the packets was initiated by a google chrome extension on a WebSocket protocol. The engineer checked message payloads to determine what information was being sent off-site but the payloads are obfuscated and unreadable. What does this STIX indicate?

- A. The extension is not performing as intended because of restrictions since ports 80 and 443 should be accessible
- B. The traffic is legitimate as the google chrome extension is reaching out to check for updates and fetches this information
- C. There is a possible data leak because payloads should be encoded as UTF-8 text
- D. There is a malware that is communicating via encrypted channels to the command and control server

Correct Answer: C

QUESTION 36

What do 2xx HTTP response codes indicate for REST APIs?

- A. additional action must be taken by the client to complete the request
- B. the server takes responsibility for error status codes
- C. communication of transfer protocol-level information
- D. successful acceptance of the client's request

Correct Answer: D

Section: (none)

QUESTION 37

An engineer received an alert of a zero-day vulnerability affecting desktop phones through which an attacker sends a crafted packet to a device, resets the credentials, makes the device unavailable, and allows a default administrator account login. Which step should an engineer take after receiving this alert?

- A. Initiate a triage meeting to acknowledge the vulnerability and its potential impact
- B. Determine company usage of the affected products
- C. Search for a patch to install from the vendor
- D. Implement restrictions within the VoIP VLANs

Correct Answer: C

QUESTION 38

```
def get_umbrella_dispos(domains):
    # put in right format to pass as argument in POST request
    values = str(json.dumps(domains))
    req = requests.post(investigate_url, data=values, headers=headers)
    # time for timestamp of verdict domain
    time = datetime.now().isoformat()
    # error handling if true then the request was HTTP 200, so successful
    if(req.status_code == 200):
        print("SUCCESS: request has the following code: 200\n")
        output = req.json()

        if(domain_status == -1):
            print("The domain %(domain)s is found MALICIOUS at %(time)s\n" % {'domain': domain, 'time': time})
        elif(domain_status == 1):
            print("The domain %(domain)s is found CLEAN at %(time)s\n" %
                  {'domain': domain, 'time': time})
        else:
            print("The domain %(domain)s is found UNDEFINED / RISKY at %(time)s\n" %
                  {'domain': domain, 'time': time})
    else:
        print("An error has occurred with the following code %(error)s, please consult the following link:
              https://docs.umbrella.com/investigate-api/"%
              {'error': req.status_code})
```

Refer to the exhibit. Which code snippet will parse the response to identify the status of the domain as malicious, clean or undefined? A.

```
for domain in domains[:]:
    domain_status = domain_output["status"]

while domain in domains:
    domain_status = domain_output["status"]

for domain in domains:
    domain_output = output[domain]
    domain_status = domain_output["status"]

while domains in domains:
    domain_output = output[domain]
    domain_status = domain_output["status"]
```

QUESTION 39

An engineer receives an incident ticket with hundreds of intrusion alerts that require investigation. An analysis of the incident log shows that the alerts are from trusted IP addresses and internal devices. The final incident report stated that these alerts were false positives and that no intrusions were detected. What action should be taken to harden the network?

- A. Move the IPS to after the firewall facing the internal network
- B. Move the IPS to before the firewall facing the outside network
- C. Configure the proxy service on the IPS
- D. Configure reverse port forwarding on the IPS

QUESTION 40

A SOC team is informed that a UK-based user will be traveling between three countries over the next 60 days. Having the names of the 3 destination countries and the user's working hours, what must the analyst do next to detect an abnormal behavior?

- A. Create a rule triggered by 3 failed VPN connection attempts in an 8-hour period
- B. Create a rule triggered by 1 successful VPN connection from any nondestination country
- C. Create a rule triggered by multiple successful VPN connections from the destination countries
- D. Analyze the logs from all countries related to this user during the traveling period

QUESTION 42

An employee abused PowerShell commands and script interpreters, which lead to an indicator of compromise (IOC) trigger. The IOC event shows that a known malicious file has been executed, and there is an increased likelihood of a breach. Which indicator generated this IOC event?

- A. ExecutedMalware.ioc
- B. Crossrider.ioc
- C. ConnectToSuspiciousDomain.ioc

D. W32 AccesschkUtility.ioc

QUESTION 43

Refer to the exhibit. Which command was executed in PowerShell to generate this log?

Max (K)	Retain	OverflowAction	Entries	Log
15,168	0	OverwriteAsNeeded	20,792	Application
15,168	0	OverwriteAsNeeded	12,559	System
15,360	0	OverwriteAsNeeded	11,173	Windows PowerShell

- A. Get-EventLog -LogName*
- B. Get-EventLog -List
- C. Get-WinEvent -ListLog* -ComputerName localhost
- D. Get-WinEvent -ListLog*

Correct Answer: A

QUESTION 44

Refer to the exhibit. Cisco Rapid Threat Containment using Cisco Secure Network Analytics (Stealthwatch) and ISE detects the threat of malware-infected 802.1x authenticated endpoints and places that endpoint into a Quarantine VLAN using Adaptive Network Control policy. Which telemetry feeds were correlated with SMC to identify the malware?

- A. NetFlow and event data
- B. event data and syslog data
- C. SNMP and syslog data
- D. NetFlow and SNMP

QUESTION 46

A security analyst receives an escalation regarding an unidentified connection on the Accounting A1 server within a monitored zone. The analyst pulls the logs and discovers that a Powershell process and a WMI tool process were started on the server after the connection was established and that a PE format file was created in the system directory. What is the next step the analyst should take?

- A. Isolate the server and perform forensic analysis of the file to determine the type and vector of a possible attack
- B. Identify the server owner through the CMDB and contact the owner to determine if these were planned and identifiable activities
- C. Review the server backup and identify server content and data criticality to assess the intrusion risk
- D. Perform behavioral analysis of the processes on an isolated workstation and perform cleaning procedures if the file is malicious

Correct Answer: C

QUESTION 47

A security expert is investigating a breach that resulted in a \$32 million loss from customer accounts. Hackers were able to steal API keys and two-factor codes due to a vulnerability that was introduced in a new code a few weeks before the attack. Which step was missed that would have prevented this breach?

- A. use of the Nmap tool to identify the vulnerability when the new code was deployed
- B. implementation of a firewall and intrusion detection system
- C. implementation of an endpoint protection system
- D. use of SecDevOps to detect the vulnerability during development

Correct Answer: D

QUESTION 48

An API developer is improving an application code to prevent DDoS attacks. The solution needs to accommodate instances of a large number of API requests coming for legitimate purposes from trustworthy services. Which solution should be implemented?

- A. Restrict the number of requests based on a calculation of daily averages. If the limit is exceeded, temporarily block access from the IP address and return a 402 HTTP error code.
- B. Implement REST API Security Essentials solution to automatically mitigate limit exhaustion. If the limit is exceeded, temporarily block access from the service and return a 409 HTTP error code.
- C. Increase a limit of replies in a given interval for each API. If the limit is exceeded, block access from the API key permanently and return a 450 HTTP error code.
- D. Apply a limit to the number of requests in a given time interval for each API. If the rate is exceeded, block access from the API key temporarily and return a 429 HTTP error code.

Correct Answer: D

QUESTION 49

```
alert tcp $EXTERNAL_NET any -> $HOME_NET 143 ( msg:"PROTOCOL-  
IMAP login brute force attempt";  
flow:to_server,established,no_stream;  
content:"LOGIN",fast_pattern,nocase; detection_filter:track  
by_dst, count 5, seconds 900; metadata:ruleset community;  
service:imap; reference:url,attack.mitre.org/techniques/T1110;  
classtype:suspicious-login; sid:2273; rev:12; )
```

Refer to the exhibit. IDS is producing an increased amount of false positive events about brute force attempts on the organization's mail server. How should the Snort rule be modified to improve performance?

- A. Block list of internal IPs from the rule
- B. Change the rule content match to case sensitive
- C. Set the rule to track the source IP
- D. Tune the count and seconds threshold of the rule
