

Exam Code: 000-864

Exam Name: Sys i IT Simplification: Intg.

BladeCntr+System x Tech V5R4

Vendor: IBM

Version: DEMO

Part: A

1: A System i customer has an iSCSI attached BladeCenter with 14 blades. The BladeCenter has Ethernet switches installed in Bay 1 and Bay 3. They would like to use a second initiator port on one of their blades. What parts are needed?

- A.1 Ethernet switch in Bay 2
- B.1 Ethernet switch in Bay 4
- C.1 Ethernet switch in Bay 2 and a second initiator HBA on the blade
- D.1 Ethernet switch in Bay 4 and a second initiator HBA on the blade

Correct Answers: B

2: When adding an IXS/IXA to a System i, what changes need to be considered for the i5/OS memory pools?

- A.The *MACHINE pool must use expert cache.
- B.The *MACHINE pool will need more memory.
- C.A private pool for the virtual LAN should be established.
- D.A shared pool for the Integration for Windows Server Licensed Program Product (LPP) is required.

Correct Answers: B

3: A customer has a System i5 520 1/2-way with five 70 GB RAID protected disk drives that are at 50% capacity. The current i5/OS applications are very I/O intensive. A performance-critical SQL server application that requires 100 GB of storage is going to be installed on a uni-processor integrated server. Which of the following solutions meets the performance requirement of the SQL application?

- A.Add 2 GB of System i memory.
- B.Activate an on-demand processor.
- C.Add three drives to the current RAID set.
- D.Create a new user ASP to contain the application storage spaces.

Correct Answers: C

4: If six blade servers are installed in a BladeCenter, which I/O BAY supports the second port of the initiator iSCSI HBAs of all installed blade servers?

- A.Bay 1
- B.Bay 2
- C.Bay 3
- D.Bay 4

Correct Answers: D

5: A customer has an i825, running V5R3, with an x360 IXA attached server. They are upgrading to an i520 and migrating their IXA to iSCSI. In addition to purchasing new System i hardware, which of the following steps are required to deliver a working solution?

- A.Replace IXA in the x360 with iSCSI initiator HBA. Migrate i825 onto i520 at V5R3M5. Follow iSCSI install read me first to complete the iSCSI configuration and installation.

B. Replace x360 with x3850. Add iSCSI initiator HBA to x3850. Migrate i825 onto i520 at V5R3M5. Follow iSCSI install read me first to complete the iSCSI configuration and installation.

C. Upgrade the i5/OS on i825 to V5R4. Replace IXA in the x360 with iSCSI initiator HBA. Migrate i825 onto i520. Follow iSCSI install read me first to complete the iSCSI configuration and installation.

D. Upgrade the i5/OS on i825 to V5R4. Replace x360 with x3850. Add iSCSI initiator HBA to x3850. Migrate i825 onto i520. Follow iSCSI install read me first to complete the iSCSI configuration and installation.

Correct Answers: D

6: A customer that wants to install multiple iSCSI servers needs to ensure which of the following software products are required to be installed on their System i?

A. 5722-TC1 *BASE TCP/IP Connectivity Utilities 5722-WSV iSeries Integration for Windows Server 5722-DG1 IBM HTTP Server for i5/OS

B. 5722-TC1 *BASE TCP/IP Connectivity Utilities 5722-DR1 IBM Director 5.10 5722-DG1 IBM HTTP Server for i5/OS

C. 5722-TC1 *BASE TCP/IP Connectivity Utilities 5722-DR1 IBM Director 5.10 5722-WSV iSeries Integration for Windows Server

D. 5722-TC1 *BASE TCP/IP Connectivity Utilities 5722-SS1 option 12: Host Servers 5722-DG1 IBM HTTP Server for i5/OS

Correct Answers: B

7: A customer with a System i model 520 with two 5095 expansion units wants to add two IXA attached integrated servers. What HSL configuration is recommended?

A. Add a separate loop for the IXAs.

B. Alternate the towers and the IXAs, one by one, in the loop.

C. Place the IXAs in the center of the loop, leaving the towers adjacent to the 520 unit.

D. Place the towers in the center of the loop, leaving the IXAs adjacent to the 520 unit.

Correct Answers: C

8: A customer has two System x servers attached via iSCSI to a System i5 520. The application to be run on each server requires two initiator HBAs. What is the minimum number of target HBAs required?

A. 1

B. 2

C. 3

D. 4

Correct Answers: B

9: A customer has a System i 520, seven standalone IBM x336 servers, and three standalone Dell PowerEdge servers. All of the Windows applications running on these servers have very low I/O. They would like to integrate all the Intel servers to the 520 with one target iSCSI HBA, while reusing existing hardware. How many of these servers can be integrated?

A. Seven IBM servers

- B.Seven IBM servers and one Dell server
- C.Seven IBM servers and one Dell server using iSCSI software initiator
- D.Seven IBM servers and three Dell servers using iSCSI software initiator

Correct Answers: A

10: A customer with a System i model 550 wants to implement 14 integrated servers on a BladeCenter. Two of the blade servers will be running SQL server, drive large amounts of I/O, and require dedicated target HBAs for their data drives. The other blade servers run typical workloads without excessive I/O, but the customer does not know the amount of disk I/O that their servers currently drive. What is the recommended minimum number of HBAs needed?

- A.Two target HBAs, plus one for redundancy
- B.Five target HBAs, plus one for redundancy
- C.Seven target HBAs, plus one for redundancy
- D.Eight target HBAs, plus one for redundancy

Correct Answers: C

11: A customer has a System i server with three 0595 I/O towers attached. They have two partitions, one running V5R4 and one partition running V5R3. In the V5R3 partition, they currently have four IXA attached x366 servers. The customer purchased four new System x x3850 servers and wants to integrated them to their System i. What is the most cost effective way to do this?

- A.Integrate the four x3850 servers with IXA in the V5R3 partition.
- B.Integrate the four x3850 servers with iSCSI in the V5R4 partition.
- C.Integrate the four x3850 servers with iSCSI after upgrading the V5R3 partition to V5R3M5.
- D.Integrate two of the x3850 servers with IXA in the V5R3 partition and two of the x3850 with iSCSI in the V5R4 partition.

Correct Answers: B

12: A customer just migrated six IXA integrated servers on their System i model 520 from V5R3 to V5R4. They want to add some iSCSI integrated servers to the system. Which additional program product is required?

- A.5722-DR1 - IBM Director Server
- B.5733-VE2 - IBM Virtualization Engine
- C.5722-TC1 - TCP/IP Connectivity Utilities for i5/OS
- D.5722-SS1 base option 29 - Integrated Server Support

Correct Answers: A

13: A customer is running Windows Server 2003 on an IXS and wants to upgrade to an iSCSI attached System x server. How is this upgrade accomplished?

- A.Run the INSWNTSVR command specifying the iSCSI remote server objects and use *UPGRADE as the install option.
- B.Change the resource name of the network server description from the IXS resource name to the iSCSI remote server objects and then do a vary on.

C.Run the INSWNTSVR command specifying the iSCSI remote server objects. Install the necessary application software and migrate data from the IXS.

D.Use the Create Duplicate Object command, CRTDUPOBJ, to create a duplicate of the IXS network server description. Unlink all the server storage spaces from the IXS NWSD and attach them to the new iSCSI NWSD.

Correct Answers: C

14: In a System i Integration BladeCenter and System x solution, which of the following key functions is provided by IBM Director server?

A.Creation of the *SRVPRC, *RMTSYS and *CNNSEC objects

B.Service Processor discovery and creation of the *SRVPRC object

C.Target and initiator HBA discovery and provision of the connection between them

D.Remote Server and Service Processor discovery, power control and Windows shutdown

Correct Answers: D

15: A customer is integrating two System x servers via iSCSI to their System i. Each System x will have one initiator HBA and the System i will have one target HBA. In addition to the System i and System x external LAN IP addresses, how many IP addresses for iSCSI, VE and management connection are required to implement this solution?

A.11

B.12

C.13

D.14

Correct Answers: B

16: When installing additional software on an integrated server via CD-ROM, which CD-ROM devices can be used?

A.The IXS servers can use CD-ROM devices on either the System i or the locally attached System x server.

B.The iSCSI and IXA server can only use devices found on the System x server but System i devices are not accessible.

C.All CD-ROM devices on System i must be used for IXS servers, and all CD-ROM devices on the System x server must be used for iSCSI and IXA servers.

D.CD-ROM devices on the System x server and the System i server can be used by the iSCSI and IXA server, but only System i CD-ROM devices can be used by the IXS server.

Correct Answers: D

17: A System i customer running V5R4 has just completed installation of an integrated server. The virtual Ethernet point-to-point IP addresses assigned during the installation process conflict with existing IP addresses on the customer's network. How are these default addresses changed?

A.Run the CHGNWSD to change the Internet address parameter used by the NWSD.

B.From Windows, change the IP address. From i5/OS, create a new IP interface.

C.From Windows, change the IP address. From i5/OS delete the old IP interface, create a new IP interface and change the Internet address parameter within the NWSD using the CHGNWSD

command.

D.From Windows, delete the virtual Ethernet point-to-point adapter. Create a new IP interface in i5/OS. Restart the server and let the Windows Add Hardware wizard recreate the adapter.

Correct Answers: C

18: A customer wants to install Red Hat Enterprise Linux on their IXS. They have all of the prerequisite hardware and software installed. They need a device driver diskette for the install. Which of the following describes how this is accomplished?

A.Use the diskette that comes with the Red Hat Enterprise Linux install CDs.

B.Download the image from the System i IFS /QIBM/ProdData/IntegratedOS/Linux/x86/Install directory and use CREATEDRVR.EXE.

C.Download the image from the Red Hat Linux web page and create a bootable diskette by running the .EXE file.

D.Download the image from the System i IFS /QIBM/ProdData/IntegratedOS/Linux/x86/Install directory and use either the RAWWRITEWIN.EXE or the dd utility.

Correct Answers: D

19: A customer currently has an x3850 server with a fibre channel HBA with two local disk drives. Its application and data are stored on a fibre attached SAN. The customer has decided to integrate their x3580 with their System i server, using iSCSI in the most cost-effective way. Which valid option meets the customer's requirements?

A.Remove the local disk drives. Remove the fibre channel HBA. Install iSCSI target HBA on x3850. Follow the "iSCSI install read me first" to complete the configuration and installation.

B.Remove the local disk drives. Remove the fibre channel HBA. Install iSCSI initiator HBA on x3850. Follow the "iSCSI install read me first" to complete the configuration and installation.

C.Remove the fibre channel HBA. Install iSCSI target HBA on x3850. From the x3850 setup utility, Change the SAN Protocol to iSCSI. Follow the "iSCSI install read me first" to complete the configuration and installation.

D.Remove the fibre channel HBA. Install iSCSI initiator HBA on x3850. From the x3850 setup utility, change the SAN Protocol to iSCSI. Follow the "iSCSI install read me first" to complete the configuration and installation.

Correct Answers: B

20: A System i customer using RAID-5 is adding a new Windows application on an integrated server. A storage protection scheme is required for the system and application disks. What is the easiest approach to implement this?

A.Use Windows software RAID on three storage spaces.

B.Do nothing from Windows and allow System i to take care of disk protection.

C.Create two equal size partitions on a storage space and use Windows mirroring.

D.Use two mirrored System i disks in a user ASP and create storage space in the user ASP.

Correct Answers: B
