

**Exam Code:** 1Y0-A06

**Exam Name:** 1Y0-A06 Implementing Citrix Provisioning  
Server 5.0

**Vendor:** Citrix

**Version:** DEMO

## Part: A

1: Which step must an administrator take before configuring administrative roles within a Provisioning Server environment?

- A.Create an administrative service account
- B.Create the administrative groups in Active Directory
- C.Grant the farm administrator db\_admin rights in SQL
- D.Add the currently logged in user to the local administrator group

**Correct Answers: B**

2: Scenario: An administrator is planning a Provisioning Server 5.0 environment for a worldwide organization; there are four offices on two continents. The administrator intends to set up a different farm for each of the four office locations in North America and Europe. How many databases must the administrator plan for when setting up the Provisioning Server 5.0 environment?

- A.Four databases, one for each farm
- B.Two databases, one for each continent
- C.One database to keep all vDisks centralized
- D.Five databases, one for each farm and a back up

**Correct Answers: A**

3: For which purpose do target devices use TFTP?

- A.To request and receive a boot file from the TFTP service
- B.To request and receive the IP address of the TFTP server
- C.To contact the Stream Service to stream a vDisk to the target device
- D.To contact the least busy Provisioning Server to stream a vDisk to the target device

**Correct Answers: A**

4: According to best practices, what should an administrator do prior to installing Provisioning Server?

- A.Set up a proxy DHCP
- B.Set up the SOAP service
- C.Disable spanning tree portfast mode
- D.Assign a static IP address to each server

**Correct Answers: D**

5: Which DHCP option identifies the IP address of the TFTP service?

- A.60
- B.66
- C.67
- D.69

**Correct Answers: B**

6: An administrator is configuring a store that points to the UNC path of the Windows file share

where the vDisks are stored. Which two store types could the administrator be configuring in this scenario? (Choose two.)

- A.Site
- B.Farm
- C.Private
- D.Distributed

**Correct Answers: A B**

7: What are the four configuration requirements for a user or system account running the Stream Service? (Choose four.)

- A.Registry read access
- B.Registry read/write access
- C.Domain administration rights
- D.Read/write access to any vDisk location
- E.Datareader/Datawriter permissions to the data store
- F.Read/write access to C:\Program Files\Citrix\Provisioning Server

**Correct Answers: A D E F**

8: Scenario: An organization has several branch offices. Each branch office will have an administrator that manages target devices for their location. The farm administrator will oversee the branch office administrators and wishes to make role delegation simple and easy to manage. How should the farm administrator lay out the farm?

- A.Configure a single farm store
- B.Set up a farm for each branch location
- C.Create sites according to branch location
- D.Assign each branch location a farm administrator

**Correct Answers: C**

9: An administrator needs to ensure that all DHCP broadcasts are allowed through the routers in a network environment. What must the administrator do to ensure communication between target devices and the Provisioning Server are allowed through the routers in the network?

- A.Configure options 66 and 67 on the DHCP server.
- B.Configure the router using the ip helper command.
- C.Enable spanning tree portfast mode on all switch ports.
- D.Disable spanning tree protocol in the network environment.

**Correct Answers: B**

10: Scenario: An administrator wants to delegate management of a Provisioning Server farm. The administrator needs to delegate only these specific tasks:

1. Shut down target devices
2. Boot target devices
3. Send messages to target devices

Which role should the administrator assign for these tasks?

- A.Device Operator

- B.Site Administrator
- C.Farm Administrator
- D.Device Administrator

**Correct Answers: A**

11: When preparing to build a vDisk image from a Master Target Device, which boot option should an administrator select in the target device properties?

- A.vDisk
- B.Hard Disk
- C.Floppy Disk
- D.local HD as a boot device

**Correct Answers: B**

12: An administrator is preparing a Master Target Device for imaging. What should the administrator do before installing the target device software on the Master Target Device?

- A.Turn on spanning tree
- B.Configure the network adapter BIOS
- C.Run the Provisioning Server Image Builder
- D.Enable hibernation and power management features

**Correct Answers: B**

13: Scenario: Several branches of an organization are located throughout North America, each with its own administrator. The farm administrator for Provisioning Server wants to delegate control to each branch location administrator within the organization. How should the farm administrator organize the farm in order to provide each branch office administrator with full administrative privileges within their branch?

- A.Create a site for each branch office location
- B.Create a view for each branch office location
- C.Create a separate store for each branch office location
- D.Create a device collection for each branch office location

**Correct Answers: A**

14: In which three situations would an administrator need to mount a vDisk? (Choose three.)

- A.Creating a vDisk file
- B.Changing the image mode of the vDisk
- C.Editing the contents of a vDisk image file
- D.Viewing the contents of a vDisk image file
- E.Formatting the vDisk file so that an image can be written to it

**Correct Answers: C D E**

15: An administrator changed the location of the database in a Provisioning Server environment. In order to re-join the database to an existing Provisioning Server farm, the administrator must specify the \_\_\_\_\_ in the Configuration Wizard. (Choose the correct phrase to complete the sentence.)

- A.new location
- B.administrator group
- C.service user account
- D.farm name, site name and collection name

**Correct Answers: A**

16: An administrator must use the \_\_\_\_\_ to change previous versions of vDisks to the new Virtual Hard Disk format. (Choose the correct option to complete the sentence.)

- A..PVP file
- B.DATABASE.MDB
- C.UPGRADEAGENT.EXE
- D.VHDCONVERTER.EXE

**Correct Answers: D**

17: An administrator is preparing the hard disk of a Master Target Device for imaging. In which order must the administrator install the software on the Master Target Device before building the vDisk image? Click the Task button to complete the task. Click the Exhibit button for instructions on how to complete a Drag and Drop item.

**Place the steps in the order the administrator must install software on the Master Target Device before building the vDisk image.**

**Click the Done button when complete.**

Install service pack updates	(place step here)
Install target device software	(place step here)
Install device drivers	(place step here)
Install the operating system	(place step here)

**Correct Answers:**

**Place the steps in the order the administrator must install software on the Master Target Device before building the vDisk image.  
Click the Done button when complete.**

18: What must an administrator use to create a vDisk image of a reference target operating system?

- A.vDisk pool
- B.Image Builder utility
- C.Configuration Wizard
- D.Provisioning Server Console

**Correct Answers: B**

19: Scenario: In the headquarters of a training delivery organization, multiple training rooms are located in two separate buildings. The organization delivers different training classes each week and needs to provide different base configurations depending on the class content. How can an administrator configure the Provisioning Server farm so that the organization can re-purpose each classroom for a specific class?

- A.Create two farms with sites for each training class offered
- B.Create two stores with a vDisk pool for each training class offered
- C.Create two device collections within a single site for each training class offered
- D.Create two sites with device collections representing each training class offered

**Correct Answers: D**

20: An administrator is going through the Configuration Wizard for Provisioning Server and must now specify the network card or cards that will be used by the Stream Service. When specifying the network card, what is the minimum number of ports the administrator must remember to include in the range?

- A.2
- B.5
- C.10
- D.15

**Correct Answers: B**
