

**Exam Code:** NS0-910

**Exam Name:** Network Appliance NetCache Internet  
Access and Security Exam

**Vendor:** Network Appliance

**Version:** DEMO

## Part: A

1: Given the following entry from the Web Access log, with the default access log format, what does the entry "bob" signify?

```
1098830250.899 0.001 10.41.72.45 TCP_HIT_ACCESS_DENIED/407 496 GET
http://www.cnn.com/bob - ""
```

- A.the user making the request
- B.the hostname of the appliance
- C.the page on the CNN site
- D.the client hostname making the request

**Correct Answers: A**

2: What is the command to view the names and locations of the log files from the command line?

- A.log -l
- B.nclog -l
- C.nclog -va
- D.show config.admin.log

**Correct Answers: B**

3: Given the following log entry from the Web Access log, with the default access log format, what does DIRECT mean?

```
1093891725.752 0.080 10.32.10.92 TCP_MISS/200 10177 GET http://www.sbgs.org/sbgs.htm -
DIRECT/209.68.147.66 "text/html"
```

- A.The object must be retrieved from a parent cache.
- B.The requested URL resides outside the firewall, and the URL maps to no parents or neighbors.
- C.The URL was fetched from the source.
- D.This NetCache has no valid parents or neighbors.

**Correct Answers: C**

4: What is the difference between TCP\_MISS/200 and TCP\_HIT/200?

- A.The "miss" means that the requested object could not be found and an error is returned to the client. The "hit" means that TCP is used.
- B.The "miss" means...that the NetCache will use UDP instead. A "hit" means that TCP is used.
- C.he "miss" means...retrieved by the NetCache appliance. The "hit" means that the NetCache appliance already.
- D.The "miss" means that the object was in the cache but not available because either its TTL expired or the entry was flagged by a third party content filter such as a virus scanner. The "hit" means that the TTL was still current.

**Correct Answers: C**

5: Given the following entry from the Web Access log, what is the first column?

```
1098830250.899 0.001 10.41.72.45 TCP_HIT_ACCESS_DENIED/407 496 GET
http://www.cnn.com/bob - ""
```

- A.the size in bits

- B.the time stamp in Greenwich standard time
- C.the ID of the request
- D.the time stamp in UNIX epoch time

**Correct Answers: D**

6: Which protocol entries are recorded in the Web access log file?

- A.HTTP, FTP, RTSP
- B.HTTP, FTP, Gopher
- C.RTSP, NNTP
- D.Telnet, SNMP, SSH

**Correct Answers: B**

7: Of the following choices, which TWO are paths to configure logging? (Choose 2)

- A.Setup > System > Logging
- B.Setup > Maintenance > Logging
- C.Setup > HTTP > Logging
- D.Setup > Utilities > Logging

**Correct Answers: A C**

8: The NetCache appliance supports up to \_\_\_\_\_ SNMP communities.

- A.4
- B.8
- C.16
- D.32

**Correct Answers: B**

9: Which FOUR cache control headers below are valid? (Choose 4)

- A.Cache-Control: no-cache
- B.Pragma: do-not-cache
- C.Cache-Control: no-store
- D.Cache-Control: private
- E.Pragma: no-cache

**Correct Answers: A C D E**

10: A router performs which one of the following functions for NetCache proxies?

- A.It fragments large packets into smaller chunks that the NetCache appliance can handle.
- B.It tags Etherchannel packets for pre-processing.
- C.It delivers inbound packets from other networks and sends outbound packets destined for other networks.
- D.It strips virus packets out before they can infect the NetCache appliance.

**Correct Answers: C**

11: Which ICAP vectoring method does the anti-virus scanning use?

- A.RESPMOD\_PRECACHE

- B.REQMOD\_PRECACHE
- C.RESPMOD\_POSTCACHE
- D.REQMOD\_POSTCACHE

**Correct Answers: A**

12: Which TWO of the following can be performed by using a proxy.pac file? (Choose 2)

- A.provide for failover protection
- B.check web pages for worms or viruses
- C.distribute requests to different NetCache proxy servers
- D.shut down the computer if the user doesn't authenticate promptly

**Correct Answers: A C**

13: Given the following service farm configuration, which request will be directed to the ICAP application?

config.icapv1.farm3.attr = \marketing\_req\_precache REQMOD\_PRECACHE on rr on weak

- A.Requests about to be initiated by NetCache to the server
- B.Requests from the client before NetCache has initiated a request to the server
- C.Requests from the client after NetCache has initiated a request to the server
- D.Responses to requests initiated by NetCache after being cached on disk
- E.Responses to requests initiated by NetCache before being cached on disk

**Correct Answers: B**

14: Where is authentication server information logged?

- A.Web Access log
- B.Messages log
- C.FTP log
- D.client browser
- E.SMB Instant Messaging

**Correct Answers: B**

15: What is the advantage of using multiple authentication servers with a NetCache appliance?

- A.NetCache will deny requests if authentication isn't provided within 200ms.
- B.They ensure authenticated access if authentication server fails.
- C.They ensure authenticated access across multiple domains.
- D.Authentication uses encryption and is CPU-intensive.

**Correct Answers: B**
