QUESTION 6
You need to recommend an identify solution that meets the technical requirements. What should you recommend?

A. federated single-on (SSO) and Active Directory Federation Services (AD FS)
B. password hash synchronization and single sign-on (SSO)
C. cloud-only user accounts
D. Pass-through Authentication and single sign-on (SSO)

Correct Answer: A
Explanation:
Active Directory Federation Services is a feature and web service in the Windows Server Operating System that allows sharing of identity information outside a company's network.

Scenario: Technical Requirements include:
Prevent user passwords or hashes of passwords from being stored in Azure.

QUESTION 7
You need to implement a backup solution for App1 after the application is moved. What should you create first?

A. a recovery plan
B. an Azure Backup Server
C. a backup policy
D. a Recovery Services vault

Correct Answer: D
Explanation:
A Recovery Services vault is a logical container that stores the backup data for each protected resource, such as Azure VMs. When the backup job for a protected resource runs, it creates a recovery point inside the Recovery Services vault.

Scenario:
There are three application tiers, each with five virtual machines.
Move all the virtual machines for App1 to Azure.
Ensure that all the virtual machines for App1 are protected by backups.

QUESTION 8
HOTSPOT
You need to configure the Device settings to meet the technical requirements and the user requirements.

Which two settings should you modify?

To answer, select the appropriate settings in the answer area.

Answer Area

Save   Discard

Users may join devices to Azure AD ❶   **All**   Selected   None

Selected
No member selected

Additional local administrators on Azure AD joined devices ❶   Selected   **None**

Selected
No member selected

Users may register their devices with Azure AD ❶   **All**   None

Require Multi-Factor Auth to join devices ❶   Yes   **No**

Maximum number of devices per user ❶   50

Users may sync settings and app data across devices ❶   All   Selected   **None**

Selected
No member selected

Correct Answer:

Save   **Discard**

Users may join devices to Azure AD ❶ | All | Selected | None |

No member selected

Users may register their devices with Azure AD ❶ | All | None |

Require Multi-Factor Auth to join devices ❶ | Yes | No |

Maximum number of devices per user ❶   50

Users may sync settings and app data across devices ❶ | All | Selected | None |

Topic 3, Mix Questions

QUESTION 1
Your company registers a domain name of contoso.com.

You create an Azure DNS named contoso.com and then you add an A record to the zone for a host named www that has an IP address of 131.107.1.10.

You discover that Internet hosts are unable to resolve www.contoso.com to the 131.107.1.10 IP address.

You need to resolve the name resolution issue.

Solution: You modify the SOA record in the contoso.com zone

Does this meet the goal?

A. Yes
B. No

Correct Answer: B
Explanation:
Modify the NS record, not the SOA record.

Note:
The SOA record stores information about the name of the server that supplied the data for the zone; the administrator of the zone; the current version of the data file; the number of seconds a secondary name server should wait before checking for updates; the number of seconds a secondary name server should wait before retrying a failed zone transfer; the maximum number of seconds that a secondary name server can use data before it must either be refreshed or expire; and a default number of seconds for the time-to-live file on resource records.
