environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design. Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

To start the lab

You may start the lab by clicking the Next button.

You need to allow RDP connections over TCP port 3389 to VM1 from the internet. The solution must prevent connections from the Internet over all other TCP ports.

What should you do from the Azure portal?

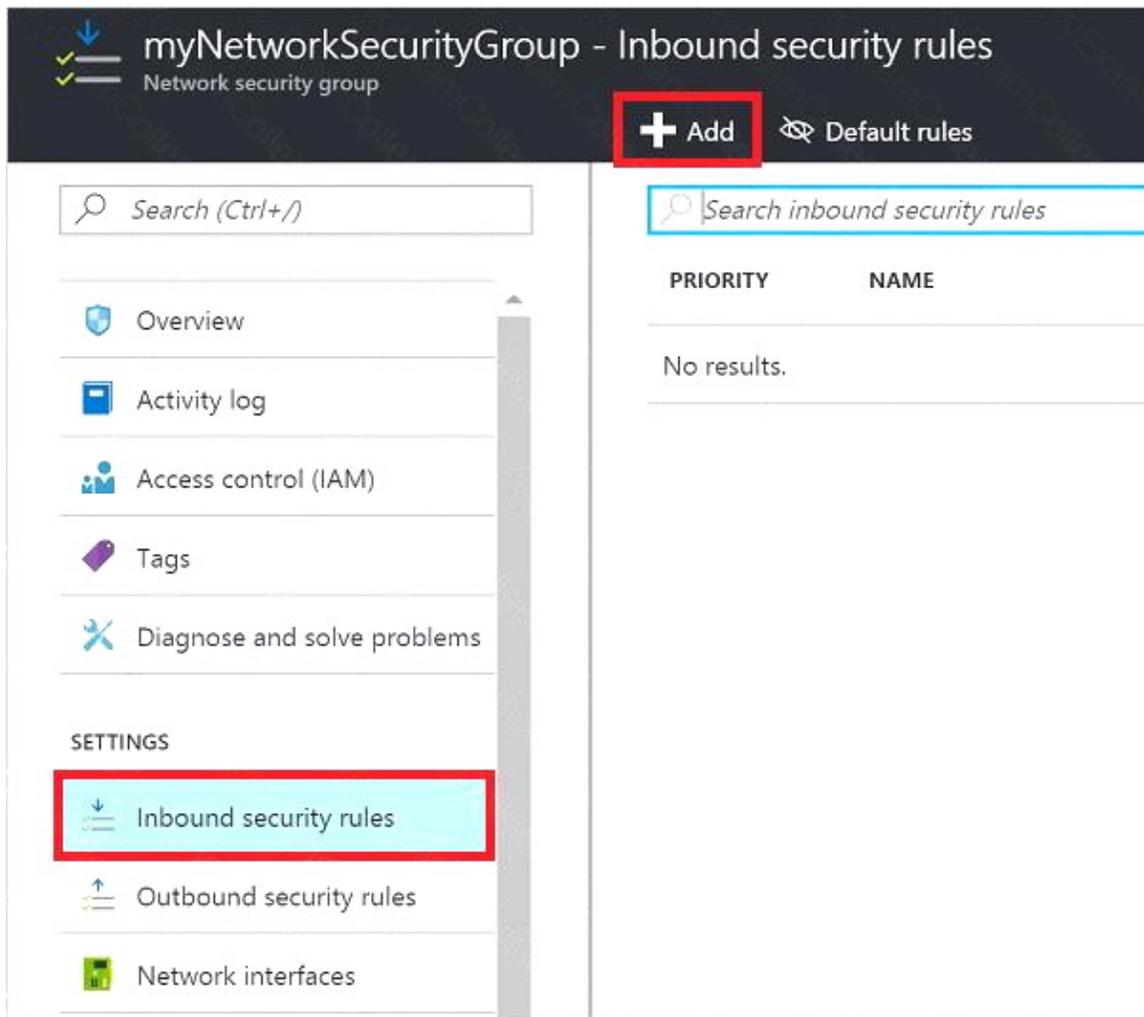

Correct Answer: See solution below.

Explanation:

Step 1: Create a new network security group

Step 2: Select your new network security group.

[Download Full Version AZ-300 Exam Dumps\(Updated in Feb/2023\)](#)

The screenshot shows the Azure portal interface for managing network security rules. The title bar reads "myNetworkSecurityGroup - Inbound security rules" with a sub-label "Network security group". In the top right corner, there is a "+ Add" button (highlighted with a red box) and a "Default rules" link. On the left sidebar, under the "SETTINGS" section, the "Inbound security rules" option is highlighted with a red box. The main content area on the right has a search bar and a table with columns "PRIORITY" and "NAME", currently displaying "No results."

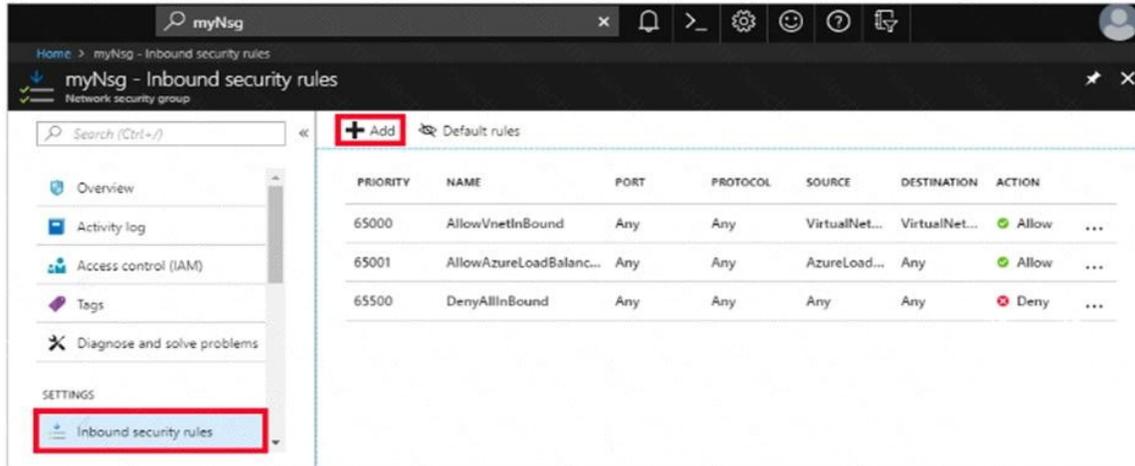

Step 3: Select Inbound security rules, . Under Add inbound security rule , enter the following

Destination: Select Network security group, and then select the security group you created previously.

Destination port ranges: 3389

Protocol: Select TCP

QUESTION 51

HOTSPOT

You have an Azure Service Bus.

You create a queue named Queue1. Queue1 is configured as shown in the following exhibit.

[Download Full Version AZ-300 Exam Dumps\(Updated in Feb/2023\)](#)

The screenshot shows the configuration for a queue named 'Queue1'. The 'Max queue size' is set to '1 GB'. The 'Message time to live' is configured as 0 days, 2 hours, 0 minutes, and 0 seconds. The 'Lock duration' is configured as 0 days, 0 hours, 5 minutes, and 0 seconds. The following options are checked: 'Enable dead lettering on message expiration' and 'Enable partitioning'. 'Enable duplicate detection' and 'Enable sessions' are unchecked.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic. NOTE: Each correct selection is worth one point.

The question presents two scenarios with dropdown menus for answer choices:

- Scenario 1: "If a message that has a TTL of four hours is written to Queue1 and is never read, the message will be [answer choice]." The dropdown menu shows four options: "deleted after two hours", "deleted after four hours", "deleted after two hours and five minutes", and "retained until manually deleted".
- Scenario 2: "If a message that has a TTL of two hours is written to Queue1, and then read after one hour, the message will be [answer choice]." The dropdown menu shows four options: "deleted immediately", "deleted in five minutes", "deleted in one hour", and "retained until manually deleted".

Correct Answer:
