**Correct Answer:**

### **QUESTION 57**

You have an Azure subscription named Subscription1 that contains two Azure networks named VNet1 and VNet2. VNet1 contains a VPN gateway named VPNGW1 that uses static routing. There is a site-to-site VPN connection between your on-premises network and VNet1.

On a computer named Client1 that runs Windows 10, you configure a point-to-site VPN connection to VNet1.

You configure virtual network peering between VNet1 and VNet2. You verify that you can connect to VNet2 from the on-premises network. Client1 is unable to connect to VNet2.

You need to ensure that you can connect Client1 to VNet2.

What should you do?

- A. Select Allow gateway transit on VNet1
- B. Download and re-install the VPN client configuration package on Client1
- C. Enable BGP on VPNGW1.
- D. Select Allow gateway transit on VNet2.

**Correct Answer: B**

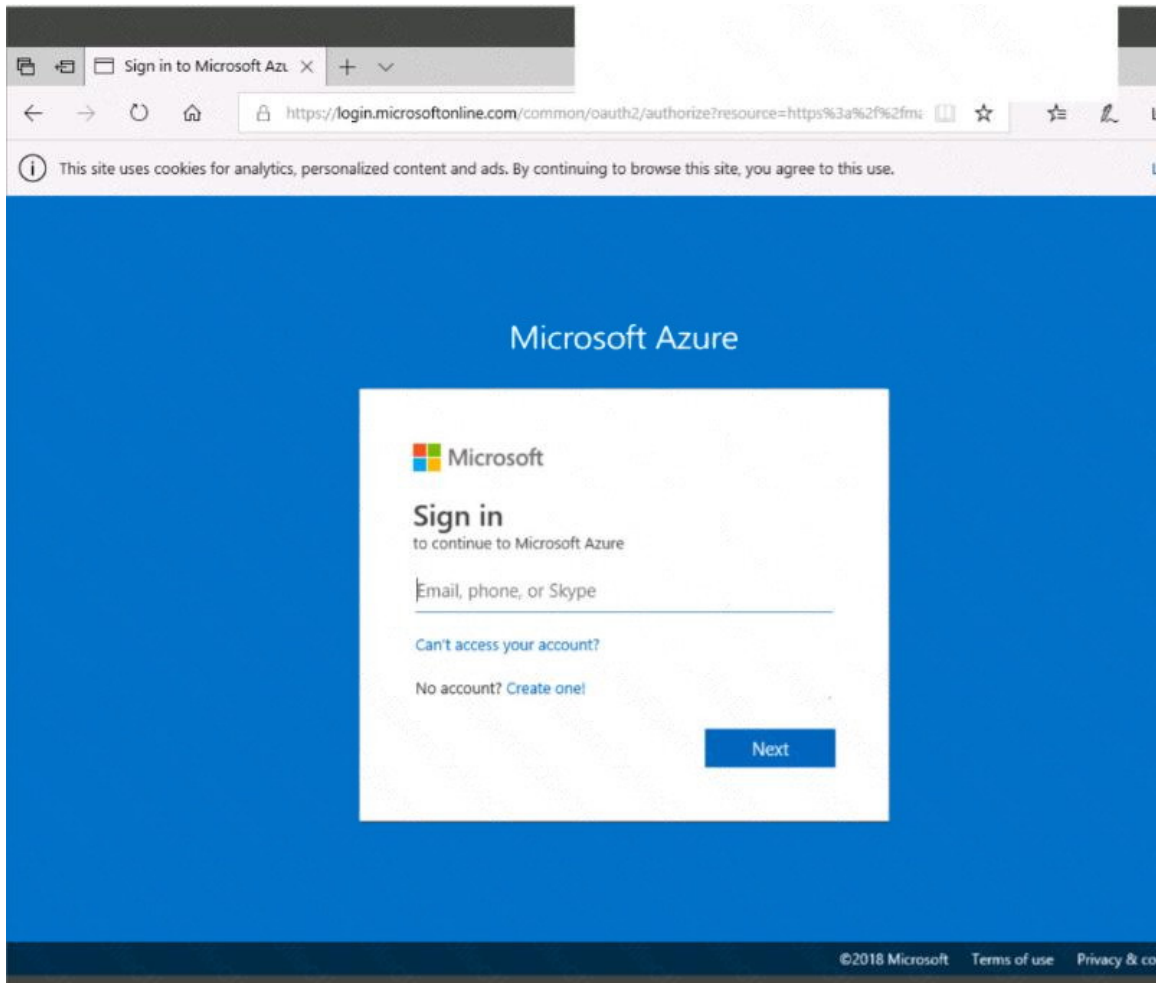

**Explanation:**

<https://docs.microsoft.com/en-us/azure/vpn-gateway/vpn-gateway-about-point-to-site-routing>

### **QUESTION 58**

Click to expand each objective. To connect to the Azure portal, type <https://portal.azure.com> in the browser address bar.
