**Correct Answer:** A

**Explanation:**

<https://docs.microsoft.com/en-us/windows-server/manage/windows-admin-center/azure/azure-extended-network>

### QUESTION 31

Your network contains an Active Directory Domain Services (AD DS) forest named contoso.com. The root domain contains the domain controllers shown in the following table.

Name	FSMO role
DC1	Domain naming master
DC2	RID master
DC3	PDC emulator
DC4	Schema master
DC5	Infrastructure master

A failure of which domain controller will prevent you from creating application partitions?

- A. DC1
- B. DC2
- C. DC3
- D. DC4
- E. DC5

**Correct Answer:** A

**Explanation:**

<https://docs.microsoft.com/en-us/troubleshoot/windows-server/identity/fsmo-roles>

### QUESTION 32

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains two servers named Server1 and Server2.

Server1 contains a disk named Disk2. Disk2 contains a folder named UserData. UserData is shared to the Domain Users group. Disk2 is configured for deduplication. Server1 is protected by using Azure Backup.

Server1 fails.

You connect Disk2 to Server2.

You need to ensure that you can access all the files on Disk2 as quickly as possible.

## **[Download Full Version AZ-800 Exam Dumps\(Updated in Feb/2023\)](#)**

What should you do?

- A. Create a storage pool.
- B. Restore files from Azure Backup.
- C. Install the File Server Resource Manager server role.
- D. Install the Data Deduplication server role.

**Correct Answer: C**

**Explanation:**

<https://docs.microsoft.com/en-us/windows-server/storage/data-deduplication/overview>

### **QUESTION 33**

You have an Azure virtual machine named VM1 that has a private IP address only.

You configure the Windows Admin Center extension on VM1.

You have an on-premises computer that runs Windows 11. You use the computer for server management.

You need to ensure that you can use Windows Admin Center from the Azure portal to manage VM1.

What should you configure?

- A. an Azure Bastion host on the virtual network that contains VM1.
- B. a VPN connection to the virtual network that contains VM1.
- C. a network security group (NSG) rule that allows inbound traffic on port 443.
- D. a private endpoint on the virtual network that contains VM1.

**Correct Answer: B**

**Explanation:**

<https://docs.microsoft.com/en-us/windows-server/manage/windows-admin-center/azure/manage-vm>

### **QUESTION 34**

Your network contains an Active Directory Domain Services (AD DS) forest. The forest contains three Active Directory sites named Site1, Site2, and Site3. Each site contains two domain controllers. The sites are connected by using DEFAULTIPSITELINK.

You open a new branch office that contains only client computers.

You need to ensure that the client computers in the new office are primarily authenticated by the domain controllers in Site1.

Solution: You configure the Try Next Closest Site Group Policy Object (GPO) setting in a GPO that is linked to Site1.

Does this meet the goal?

- A. Yes

## [Download Full Version AZ-800 Exam Dumps\(Updated in Feb/2023\)](#)

B. No

**Correct Answer: B**

### QUESTION 35

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com.

You need to identify which server is the PDC emulator for the domain.

Solution: From a command prompt, you run `netdom.exe query fsmo`.

Does this meet the goal?

A. Yes

B. No

**Correct Answer: A**

**Explanation:**

<https://activedirectorypro.com/how-to-check-fsmo-roles/>

### QUESTION 36

DRAG DROP

You have two on-premises servers named Server1 and Server2 that run Windows Server.

You have an Azure Storage account named storage1 that contains a file share named share1. Server1 syncs with share1 by using Azure File Sync.

You need to configure Server2 to sync with share1.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Actions**

- Register Server2 with the Storage Sync Service.
- Add a Storage Sync Service to the Azure subscription.
- On Server2, install the Azure File Sync agent.
- Add a cloud endpoint to the sync group.
- Add a server endpoint to the sync group.

**Answer Area**

- On Server2, install the Azure File Sync agent.
- Register Server2 with the Storage Sync Service.
- Add a server endpoint to the sync group.

**Correct Answer:**

**Actions**

- Register Server2 with the Storage Sync Service.
- Add a Storage Sync Service to the Azure subscription.
- On Server2, install the Azure File Sync agent.
- Add a cloud endpoint to the sync group.
- Add a server endpoint to the sync group.

**Answer Area**

- On Server2, install the Azure File Sync agent.
- Register Server2 with the Storage Sync Service.
- Add a server endpoint to the sync group.

### QUESTION 37

You have an Azure virtual machine named Server1 that runs a network management application. Server1 has the following network configuration.

- Network interface.Nic1

## **[Download Full Version AZ-800 Exam Dumps\(Updated in Feb/2023\)](#)**

- IP address 10.1.1.1/24
- Connected to: Vnet1/Subnet1

You need connect Server1 to an additional subnet named Vnet1/Subnet2.

What should you do?

- A. Create a private endpoint on Subnet2
- B. Add a network interface to server1.
- C. Modify the IP configurations of Nic1.
- D. Add an IP configuration to Nic1.

**Correct Answer: A**

### **QUESTION 38**

You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant Group writeback is enabled in Azure AD Connect.

The AD DS domain contains a server named Server1. Server 1 contains a shared folder named share1.

You have an Azure Storage account named storage2 that uses Azure AD-based access control. The storage2 account contains a share named shared.

You need to create a security group that meets the following requirements:

- Can contain users from the AD DS domain
- Can be used to authorize user access to share 1 and share2

What should you do?

- A. in the AD DS domain, create a universal security group
- B. in the Azure AD tenant create a security group that has assigned membership
- C. in the Azure AD Tenant create a security group that has dynamic membership.
- D. in the Azure AD tenant create a Microsoft 365 group

**Correct Answer: B**

### **QUESTION 39**

You have an Azure subscription that contains the following resources:

- An Azure Log Analytics workspace
- An Azure Automation account
- Azure Arc.

You have an on-premises server named Server1 that is onboarded to Azure Arc.

You need to manage Microsoft updates on Server1 by using Azure Arc.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

## [Download Full Version AZ-800 Exam Dumps\(Updated in Feb/2023\)](#)

- A. Add Microsoft Sentinel to the Log Analytics workspace
- B. On Server1, install the Azure Monitor agent
- C. From the Automation account, enable Update Management for Server1.
- D. From the Virtual machines data source of the Log Analytics workspace, connect Server1.

**Correct Answer:** BC

**Explanation:**

<https://docs.microsoft.com/en-us/azure/cloud-adoption-framework/manage/hybrid/server/best-practices/arc-update-management>

### QUESTION 40

DRAG DROP

You create a new Azure subscription.

You plan to deploy Azure Active Directory Domain Services (Azure AD DS) and Azure virtual machines.

You need to ensure that the virtual machines can join Azure AD DS.

Which three actions should perform in sequence? To answer, move the appropriate actions from the list of action of the answer area and arrange them in the correct order.

**Actions**

- Run the Active Directory Domain Services Installation Wizard.
- Create an Azure virtual network.
- Install the Active Directory Domain Services role.
- Install Azure AD Connect.
- Modify the settings of the Azure virtual network.
- Create an Azure AD DS instance.

**Answer Area**

Arrows indicate the sequence of actions to be performed in the answer area.

**Correct Answer:**

**Actions**

- Run the Active Directory Domain Services Installation Wizard.
- Create an Azure virtual network.
- Install the Active Directory Domain Services role.
- Install Azure AD Connect.
- Modify the settings of the Azure virtual network.
- Create an Azure AD DS instance.

**Answer Area**

- Create an Azure virtual network.
- Create an Azure AD DS instance.
- Modify the settings of the Azure virtual network.

### QUESTION 41

You have a server that runs Windows Server and has the DHCP Server role installed. The server has a scope named Scope1 that has the following configurations:

- Address range: 192.168.0.2 to 192.168.1.2 Mask 255.255.254.0
- Router: 192.168.0.1
- Lease duration: 3 days
- DNS server 172.16.0.254

You have 50 Microsoft Teams Phone devices from the same vendor. All the devices have MAC addresses within the same range.

You need to ensure that all the Teams Phone devices that receive a lease from Scope1 have IP
