**QUESTION 52**

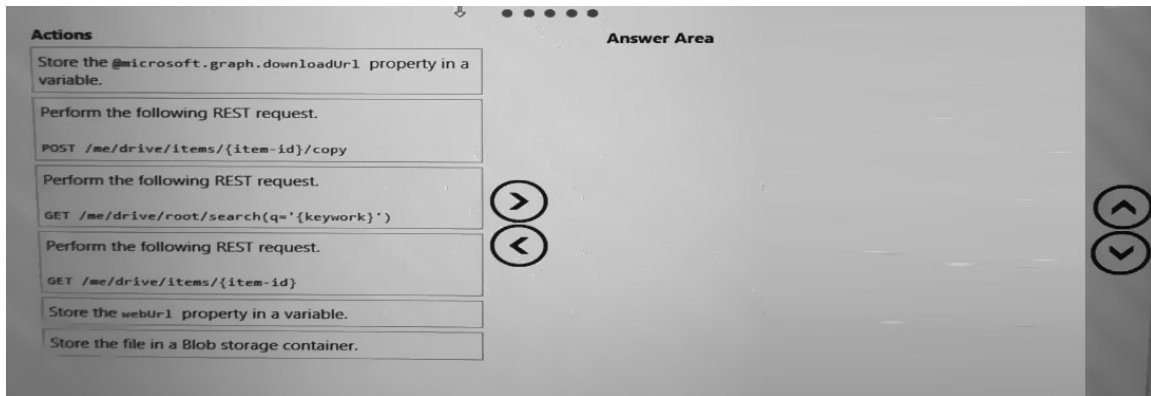

**DRAG DROP**

You are developing a sever-based application that has the following requirements:

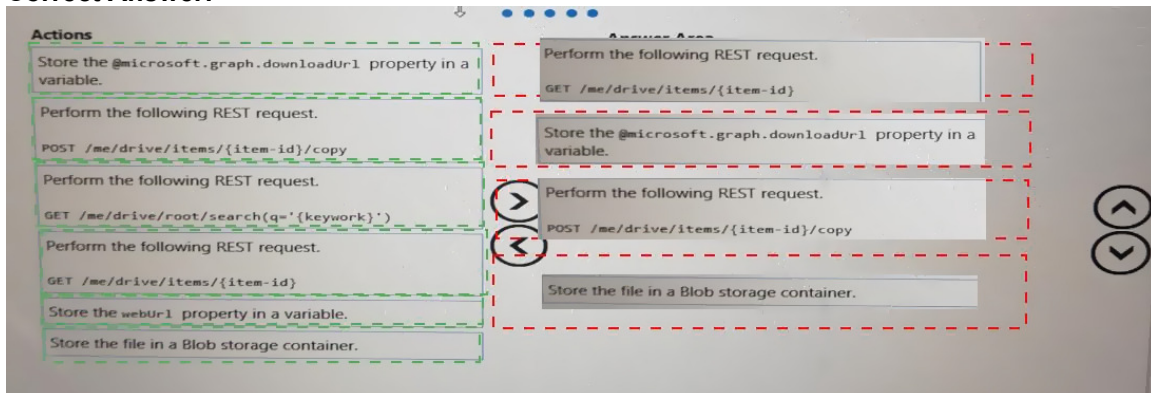

- Prompt the user to fill out a form that contains a keyword.
- Search the Microsoft OneDrive folder for files that contain the keyword and return the results to the user.
- Allow the user to select one of the files from the results.
- Copy the selected file to an Azure Blob storage container.

Which four actions should the application perform in sequence? To answer, move the actions from the list of actions to the answer area and arrange them in the correct order.

**Correct Answer:**

**QUESTION 53**

You are developing a Microsoft Teams application. Which Teams feature provides you with the ability to invoke a model popup by using the minimum amount of custom code?

- A. An adaptive card
- B. A bot
- C. A connector
- D. A task module

**Correct Answer:** B

**QUESTION 54**

Which tool can you use to generate a SharePoint Framework (SPFx) solution?

- A. Eclipse
- B. App Studio
- C. Yacc
- D. Yeoman

**Correct Answer:** D

**Explanation:**

Yeoman helps you to kickstart new projects, prescribing best practices and tools to help you stay productive. Using the Yeoman SharePoint generator, developers are able to scaffold new client-side solution projects to build, package, and deploy SharePoint solutions. The generator provides common build tools, boilerplate code, and a common playground website to host web parts for

testing.

Reference:

<https://docs.microsoft.com/en-us/sharepoint/dev/spfx/toolchain/scaffolding-projects-using-yeomansharepoint-generator>

#### **QUESTION 55**

You company has a third-party invoicing web app.

You need to display the app within Microsoft Teams for one user only. The app will not require conversational interactions.

How should you display the app by using the minimum amount of effort?

- A. Instruct the user to add a website tab
- B. Instruct the user to add an App Studio app
- C. Create a SharePoint Framework (SPFx) web part
- D. Create a search-based messaging extension

**Correct Answer: A**

**Explanation:**

There are currently three methods of app integration in Teams: Connectors, Bots, and Tabs. Tabs offer more extensive integration by allowing you to view entire third-party services within Microsoft Teams.

#### **QUESTION 56**

You have a line-of-business API that is secured by using Azure Active Directory (Azure AD).

You deploy a solution to the app catalog. The solution requests permission to the API.

What should you do in the SharePoint admin center to ensure that the solution can access the API?

- A. Create a SharePoint security group and add the solution
- B. Create an access policy
- C. Enable sandbox solutions
- D. Approve a pending permission request

**Correct Answer: D**

**Explanation:**

Developers building a SharePoint Framework solution that requires access to specific resources secured with Azure AD list these resources along with the required permission scopes in the solution manifest. When deploying the solution package to the app catalog, SharePoint creates permission requests and prompts the administrator to manage the requested permissions. For each requested permission, tenant administrators can decide whether they want to grant or deny the specific permission.

All permissions are granted to the whole tenant and not to a specific application that has requested them.

When the tenant administrator grants a specific permission, it is added to the SharePoint Online Client Extensibility Azure AD application, which is provisioned by Microsoft in every Azure AD and

which is used by the SharePoint Framework in the OAuth flow to provide solutions with valid access tokens.

### QUESTION 57

You are building a server-based web app that will use OAuth2 and will be registered with the Microsoft identity platform.

Which two values does the app require to obtain tokens from the Azure Active Directory (Azure AD) authorization endpoint? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

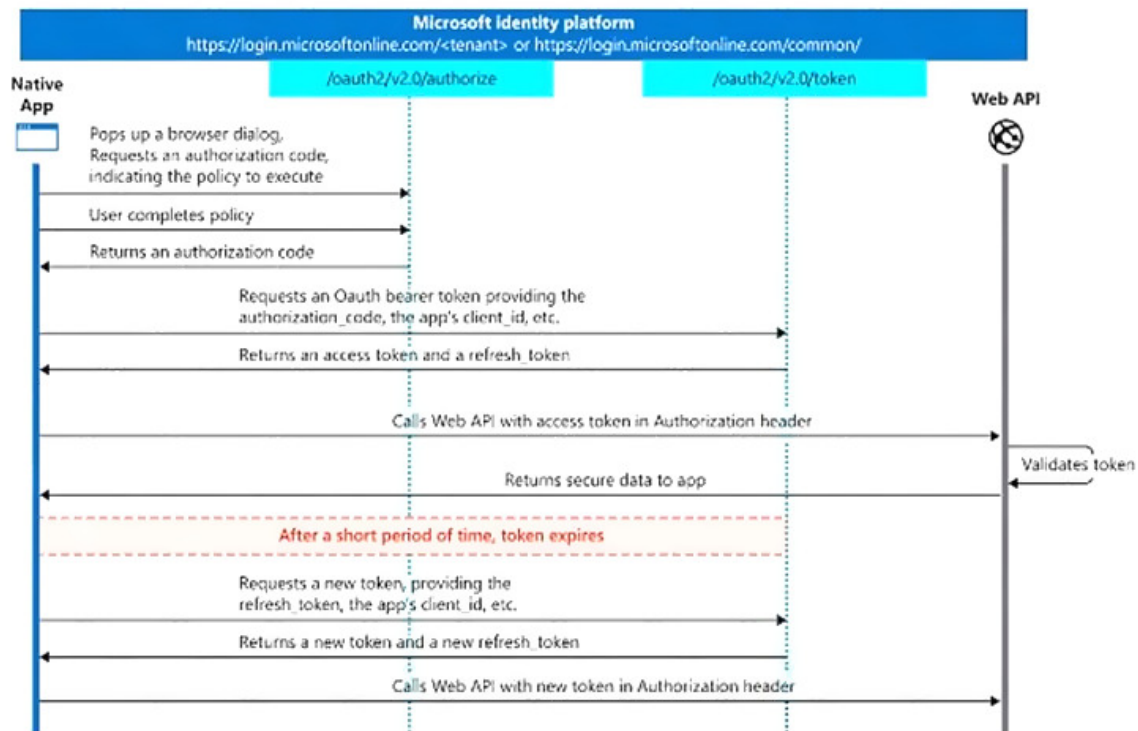

- A. the tenant ID
- B. the context token
- C. the application ID
- D. the application secret
- E. the authorization code

**Correct Answer: CE**

#### Explanation:

C: The required client\_id is the Application (client) ID that the Azure portal - App registrations experience assigned to your app.

E: The authorization code flow begins with the client directing the user to the /authorize endpoint.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/develop/v2-oauth2-auth-code-flow>

**QUESTION 58**

You are developing a SharePoint Framework (SPFx) web part. Which API should you use to retrieve the Microsoft Teams memberships of a user by using the minimum amount of code?

- A. MSGraphClient
- B. AadHttpClient
- C. SPHttpClient
- D. XMLHttpRequest

**Correct Answer: A**

**Explanation:**

You can use the Microsoft Graph API to work with Microsoft Teams. In Microsoft Graph, Microsoft Teams is represented by a group resource.

If you are targeting Microsoft Graph, you can use the MSGraphClient client object, which provides a more fluent syntax compared to AadHttpClient.

**Note:**

In versions of the SharePoint Framework starting with v.1.4.1, you can access Microsoft Graph by using either the native graph client (MSGraphClient), or the low-level type used to access any Azure AD-secured REST API (AadHttpClient).

The AadHttpClient client object is useful for consuming any REST API. You can use it to consume Microsoft

Graph or any other third-party (or first-party) REST API.

The MSGraphClient client object can consume the Microsoft Graph only. Internally it uses the AadHttpClient client object and supports the fluent syntax of the Microsoft Graph SDK.

**QUESTION 59**

This question requires that you evaluate the underlined text to determine if it is correct.

Microsoft Visual Studio Code contains samples that you can use to quickly prototype a Microsoft Office Web Add-in for Microsoft Word.

**Instructions:**

Review the underlined text. If it makes the statement correct, select "No change is needed." If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed.
- B. Microsoft AppSource
- C. The Office UI Fabric
- D. The Script Lab add-in

**Correct Answer: D**

**QUESTION 60**

You use Azure Active Directory (Azure AD) to store user identities.

The user profile information is inconsistently populated.
