Correct Answer: A

QUESTION 63
You have an invoice approval process in which an approver is sent an automated email that contains a link to a web-based accounts system whenever an invoice requires approval. Which benefit can be achieved by using actionable messages for the approval process?

A. The approver can delegate invoice approvals to other users by forwarding actionable messages
B. Invoices can be approved directly from Microsoft Outlook by using actionable messages
C. Actionable messages will work in any email client
D. Actionable messages can provide detailed auditing of all the approved invoices and can be viewed in a rollup report

Correct Answer: B
Explanation:
Whether you are filling out a survey, approving an expense report, or updating a CRM sales opportunity, Actionable Messages enable you to take quick actions right from within Outlook. Developers can now embed actions in their emails or notifications, elevating user engagement with their services and increasing organizational productivity.

QUESTION 64
You are developing a human resources application that will show users where they are in their company's organization chart.

You are adding a new feature that will display the name of a user's manager inside the application.

You need to create a REST query to retrieve the information. The solution must minimize the amount of data retrieved.

Which query should you use?

A. GET https://graph.microsoft.com/v1.0/users/{UserPricipalName}/manager?$select=displayName
B. GET https://graph.microsoft.com/v1.0/users/{UserPricipalName}/people?$filter=jobTitle eq 'manager'&$select=displayName
C. GET https://graph.microsoft.com/v1.0/users/{UserPricipalName}/contacts?$filter=jobTitle eq 'manager'
D. GET https://graph.microsoft.com/v1.0/users/{UserPricipalName}/manager

Correct Answer: A
Explanation:
Get user's manager. Returns the user or organizational contact assigned as the user's manager.

Syntax:

GET /me/manager

GET /users/{id | userPrincipalName}/manager

Only the name of the user's manager should be displayed so we use ?select=displayname

To specify a different set of properties to return than the default set provided by the Graph, use the $select query option. The $select option allows for choosing a subset or superset of the default set returned.

QUESTION 65
DRAG DROP
You are developing a web app that will display emails from the Microsoft 365 mailbox of the current signed-in user.

For performance reasons, you do not want all the emails to be loaded simultaneously, rather page-by-page as the user navigates the app.

You plan to display 30 emails per page. The most recent emails must be displayed first.

How should you complete the query parameters for the REST request to display the third page of emails? To answer, drag the appropriate query parameters to the correct targets. Each query parameter may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.
