Vendor: Citrix

Exam Code: 1Y0-A18

Exam Name: Administration for Citrix XenApp 6

Version: Demo

QUESTION 1
A zone data collector _____ . (Choose the correct option to complete the sentence.)

A. handles ICA traffic for the zone
B. writes information to the data store
C. is responsible for maintaining server load evaluator information
D. makes sure all XML traffic is routed between the servers in the zone

Correct Answer: C

QUESTION 2
A company's XenApp farm is spread across four geographically separated datacenters. Each datacenter is its own zone in the farm. Datacenter A contains 50 servers. Datacenter B contains 100 servers. Datacenter C contains 20 servers, and Datacenter D contains 10 servers, one of which is the license server. Which datacenter would be the appropriate location for the farm's data store?

A. Datacenter A
B. Datacenter B
C. Datacenter C
D. Datacenter D

Correct Answer: B

QUESTION 3
Which port is used by the Citrix License Administration Console?

A. 2598
B. 7279
C. 8082
D. 27000

Correct Answer: C

QUESTION 4
A user successfully launched a published application delivered from a XenApp server running within the user's LAN. Session Reliability has been disabled. Which port is used for communication between the Citrix online plug-in and the XenApp server?

A. 80
B. 1494

C. 2598

D. 3389

Correct Answer: B

QUESTION 5

A user successfully launched a published application through an Access Gateway. The application is delivered from a XenApp server running in the datacenter and Session Reliability has been enabled. Which port is used for communication between the Access Gateway and the XenApp server?

A. 80

B. 443

C. 1494

D. 2598

Correct Answer: C

QUESTION 6

Which statement best describes the purpose of the data collector?

A. It verifies a user's permissions for the requested application.

B. It is used by the Delivery Services Console to run the farm discovery.

C. It authenticates the user and populates the Web Interface with their icons.

D. It maintains and communicates farm information to data collectors in other zones

Correct Answer: D

QUESTION 7

A XenApp farm is located in a datacenter in New York. A request has been made to add a XenApp server in London. The WAN network connection is stable enough to allow the new server to exist in the New York farm. What should be done by the administrator to ensure that the least amount of Citrix IMA traffic traverses the WAN?

A. The administrator needs to create a new zone and add the new server to that zone, making it the zone data collector.

B. The administrator does not need to create a new zone because Citrix IMA traffic will only originate from the data collector.

C. The administrator does not need to create a new zone if "Not Preferred" is specified as the election preference for the new server.

D. The administrator does not need to create a zone for the new server, but rather create a new

farm and link Citrix IMA traffic in the Delivery Center.

Correct Answer: A

QUESTION 8
Which three options can an administrator use to add members to the Remote Desktop Users group during a XenApp installation? (Choose three.)

A. Power Users
B. Domain Users
C. Administrators
D. Anonymous Users
E. Authenticated Users
F. List of users from the Users Group

Correct Answer: DEF

QUESTION 9
Which method can be used when changing the farm membership of a server?

A. Run the QFARM command.
B. Run the CHFARM command.
C. Use XenApp Server Role Manager.
D. Use the Delivery Services Console.

Correct Answer: C

QUESTION 10
Which statement correctly describes behavior of the XenApp Server Role Manager?

A. Remote Desktop Services will be automatically installed. Within the XenApp Server role the online plug-in is automatically installed.
B. Remote Desktop Services will need to be installed separately. Within the XenApp Server role the online plug-in is automatically installed.
C. Remote Desktop Services will be automatically installed. Within the XenApp Server role both the online and offline plug-in are automatically installed.
D. Remote Desktop Services will need to be installed separately. Within the XenApp Server role both the online and offline plug-in are automatically installed.

Correct Answer: C

QUESTION 11

The main application used in an organization is the CRM application, which is published in a separate application folder called CRM. An administrator must configure delegated administration rights for the help desk. The help desk's administrative rights will need to be limited to:

- View all areas of the Delivery Services Console.
- Perform session tasks related to their job, such as resetting sessions across the farm.

Which approach would give the required result for the help desk group?

A. Configure View Only permissions for the Delivery Services Console and configure Full administration permissions for the session's node.
B. Configure View Only permissions for the Delivery Services Console and configure Full administration permissions for the CRM application folder.
C. Configure View Only permissions for the following nodes: Administrators, Farm Management, Printers and Printer Drivers, Applications and Server Information. Configure Full administration permissions for "Sessions" under the server's node.
D. Configure View Only permissions for the following nodes: Administrators, Farm Management, Printers and Printer Drivers, Applications and Server Information. Configure Full administration permissions for "Sessions" under the CRM folder in the application node.

Correct Answer: C

QUESTION 12

Which lightweight plug-in is installed with minimal user interaction?

A. MAC plug-in
B. Online plug-in
C. Online plug-in - Web
D. Secure Access plug-in

Correct Answer: C

QUESTION 13

Users access their XenApp applications through a Web Interface. Each XenApp server has all the required applications installed. The administrator discovers that users are being connected to several different XenApp servers while using their applications, causing profile corruption. How should the administrator resolve this issue?

A. Utilize the session sharing feature by standardizing all published application settings.
B. Utilize the Session Reliability feature by upgrading all online plug-ins to the latest version.

C. Utilize the session sharing feature by standardizing only the screen resolution on all published applications.

D. Utilize the Session Reliability feature by opening port 2598 between the XenApp servers and the Web Interface server.

Correct Answer: A

QUESTION 14
Which two methods can an administrator use to deliver the plug-in to multiple users at the same time? (Choose two.)

A. Microsoft transform file
B. Command line interface
C. Merchandising Server rules
D. Active Directory Group Policy

Correct Answer: CD

QUESTION 15
An administrator has configured an HDX MediaStream for Flash (client-side) policy and set the Flash latency threshold to 75 milliseconds. What will the result be if the latency between the server and client device is greater than 75 milliseconds?

A. Flash content quality is improved.
B. Flash content quality is degraded.
C. Flash content is rendered on the client.
D. Flash content is rendered on the server.

Correct Answer: D

QUESTION 16
Users want the best performance when displaying images in their sessions. The administrator decides to configure HDX 3D Image Acceleration to remove redundant data from the images and improve the image transfer speed. The administrator wants to set this feature to remove the maximum amount of redundant data so it uses the minimum bandwidth requirements. Which lossy compression level setting must the administrator select to meet these requirements?

A. None
B. Low
C. Medium
D. High

Correct Answer: D

QUESTION 17
An administrator has published RealOne Player in the farm so users can view multimedia files from within their sessions and play them on their client devices. HDX MediaStream Multimedia Acceleration is enabled in the farm. Users are complaining that the multimedia files are NOT playing correctly. What must the administrator do to ensure that multimedia files play in user sessions?

A. Disable audio on the server.
B. Enable HDX MediaStream for Flash.
C. Increase the buffer size on the server.
D. Install video and audio codecs on the client device

Correct Answer: D

QUESTION 18
Where is SmoothRoaming configured?

A. In the plug-in
B. In a Citrix policy
C. In the farm properties
D. In the Web Interface site properties

Correct Answer: D

QUESTION 19
Which option is used to establish farm-wide shadowing settings to force a shadow acceptance prompt and force logging on all shadow connections?

A. Citrix policy
B. Shadow Taskbar
C. XenApp Server Role Manager
D. Web Interface Management Console

Correct Answer: A

QUESTION 20

Where is CPU Utilization Management configured?

A. Farm properties
B. Citrix Users policy
C. Citrix Computers policy
D. Worker Group properties

Correct Answer: C

QUESTION 21

An administrator wants to know the server load for a server named CTXXA01. Which two commands can an administrator use from any Citrix server in the farm to get the proper results? (Choose two.)

A. qfarm /load
B. query farm CTXXA01 /load
C. query user /server:CTXXA01
D. query session /server:CTXXA01

Correct Answer: AB

QUESTION 22

The Citrix IMA Service test in Health Monitoring and Recovery is configured to run on a server. An administrator needs to ensure that if the test fails, existing ICA connections are maintained and attempts to reconnect disconnected sessions are made, but new ICA sessions cannot be started on the server. Which recovery action must the administrator select for the test?

A. Alert Only
B. Restart IMA
C. Reboot Server
D. Remove Server from load balancing

Correct Answer: D

QUESTION 23

An administrator for an organization needs to limit the sessions to one connection for vendors and authenticated users. However, HR department members must run two sessions at once. The administrator creates three policies to control the number of user sessions.

• Policy A Limits ALL users to one session

- Policy B Limits Vendors to one session
- Policy C Limits HR to two sessions

In order to ascertain the policy behavior the administrator must determine the level of priority to allow the HR department access to multiple sessions. Which priority is needed to apply these policies and to ensure that HR is able to run two sessions simultaneously?

A. Set the priority of Policy B to the highest level, Policy C to the next level and Policy A to the lowest level.
B. Set the priority of Policy B to the highest level, Policy A to the next level and Policy C to the lowest level.
C. Set the priority of Policy A to the highest level, Policy B to the next level and Policy C to the lowest level.
D. Set the priority of Policy C to the highest level, Policy B to the next level and Policy A to the lowest level.

Correct Answer: D

QUESTION 24
An administrator needs to configure the XenApp farm in a highly secure environment. All administrative actions must be logged, even if the configuration logging database is unavailable. Which two options must the administrator configure to make this as secure as possible? (Choose two.)

A. Ensure all administrators know the database password.
B. Enable IMA encryption before enabling configuration logging.
C. Use a shared database account for access to the configuration logging database.
D. Ensure the 'Allow changes to the farm when logging database is disconnected' option is not selected.

Correct Answer: BD

QUESTION 25
Which role is assigned to a custom XenApp Administrator by default?

A. Add server to farm
B. View Administrators
C. Log on to Management Console
D. View all areas of server farm management

Correct Answer: C

QUESTION 26

An administrator wants to use session sharing for all published applications. All applications are installed and published on all of the servers in the farm. What else must the administrator do to ensure that session sharing is used?

A. Specify file type associations.
B. Enable the Connection access control policy rule.
C. Ensure the offline plug-in is installed on client devices.
D. Configure all published applications with the same settings.

Correct Answer: D

QUESTION 27

An administrator is setting up a new XenApp environment for a warehouse. Thin clients will be used with a Linux-based operating system and XenApp will be delivered across a low speed wide area network. Users will need to be given an experience similar to what is available from a Windows desktop operating system. Which type of published application will allow for this?

A. Server Desktop
B. Remote Desktop
C. Published content
D. Published application, Explorer.EXE, installed on a server

Correct Answer: A

QUESTION 28

Users frequently open documents on their local PCs. Going forward, an administrator plans to have the users open documents with the published application on the XenApp servers. Which action must the administrator take to accomplish this?

A. Install the offline plug-in.
B. Configure the Web Interface to allow content redirection.
C. Verify the Client drive redirection user policy is enabled.
D. Associate the required file type to the published application.

Correct Answer: D

QUESTION 29

Which two statements are correct for an application delivered to a client device by Citrix application streaming? (Choose two.)

A. It requires the offline plug-in to be installed.
B. It can be used when connected to the network.
C. It consumes CPU and memory resources on the XenApp server.
D. Screen updates are sent from the server using the ICA protocol.

Correct Answer: AB

QUESTION 30

An administrator has been asked to roll out a new version of an existing application. The new software needs to be deployed alongside the existing version without making any permanent changes to the XenApp servers. Clients are a mixture of Windows and Linux thin clients and all have the XenApp online plug-in installed. How should the administrator roll out the application?

A. Create a streaming profile of the new application, and publish the application using the 'Streamed to client' profile.
B. Create a streaming profile of the new application, then publish the application using the 'Accessed from a server' and 'Streamed to server1 profile.
C. Upgrade the existing version of the software on the XenApp servers, and publish the application using the 'Accessed from a server' and 'Installed application' profile.
D. Install the new version of the application onto a different XenApp server, and publish the application using the 'Accessed from a server' and 'Installed application' profile.

Correct Answer: B

EnsurePass.com Members Features:

1. Verified Answers researched by industry experts.
2. Q&As are downloadable in PDF and VCE format.
3. 98% success Guarantee and **Money Back** Guarantee.
