

VMware

Exam 2V0-651

VMware Certified Professional 6 – Desktop and Mobility Beta

Version: 6.0

[Total Questions: 110]

Question No : 1

A View environment includes a View Connection Server and View security server.

The View Connection Server has the following configuration:

- ✍ DNSName: view.company.com
- ✍ IP Address: 192.168.1.1

The View security server has the following configuration:

- ✍ DNS Name: view.company.com
- ✍ IP Address: 192.168.1.1

An administrator needs to set up View to allow external access for the users over Blast.

Which option represents the format in which information must be entered into the Blast External URL field of the security server in View Administrator?

- A. https://security.company.com:443
- B. https://10.10.10.1:18443
- C. https://security.company.com:8443
- D. security.company.com:22443

Answer: C

Question No : 2

In addition to the default user attributes, which specific Active Directory attribute is required for integrating View with Workspace Portal?

- A. User Distinguished Name
- B. SAMAccountName
- C. SAMAccountType
- D. User Principal Name

Answer: D

Question No : 3

Dumps with PDF and VCE (+Free VCE Software)

An administrator needs an Active Directory service account to use for Quickprep. The organization's policies do not allow the service account to create new computer accounts in Active Directory. Pre-existing computer accounts must be reused.

Which three Active Directory permissions are required for the service account? (Choose three.)

- A. List Contents
- B. Read All Properties
- C. Delete Computer Object
- D. Reset Password
- E. Write All Properties

Answer: A,B,D

Question No : 4

An administrator experiences a system failure on the vCenter Server during a Linked-Clone recompose operation.

Which two methods should the administrator use to resolve the unsuccessful recompose operation? (Choose two.)

- A. Select a new snapshot and then recompose once more.
- B. Delete the failed snapshot and then recompose once more.
- C. Delete the failed snapshot, create a new snapshot, and then recompose once more.
- D. Select the snapshot that was used in the last successful recomposition and then recompose once more.

Answer: A,D

Question No : 5

An application was packaged using ThinApp and access is restricted to an Active Directory group called Customer Services. An administrator needs to remove this restriction.

What should the administrator do to remove this restriction with the least effort?

- A. Repackage the application, selecting Everyone from the Setup Capture wizard.
- B. Remove the PermittedGroups section from package.ini and execute build.bat.
- C. Change PermittedGroups=1 to 0 within package.ini and execute sbmerge.exe.
- D. Change PermittedGroups=0 to 1 within package.ini and execute sbmerge.exe.

Answer: B

Question No : 6

An administrator is performing the post-installation configuration of Workspace Portal. While running the setup wizard, the administrator receives an error message. The error message appears during configuration of the Directory settings and indicates that the user account cannot be found.

The administrator has confirmed the following:

- ✍ The user account exists in Active Directory.
- ✍ The user account has all of the required attributes.

What is causing the error?

- A. The user account is located below the Base DN.
- B. The user account has not been entered into the Global Catalog.
- C. The user account is located above the Base DN.
- D. The user account name is too long.

Answer: C

Question No : 7

An administrator installed compatible physical GPUs in all ESXi hosts specified for a View desktop pool. The administrator needs to configure the desktop pool with Virtual Shared Graphics Acceleration (vSGA).

Which virtual machine configuration should the administrator use to meet this requirement?

- A. Virtual machine hardware version 9 or later
- B. Video card > Auto-detect settings
- C. Video memory = 512MB
- D. Virtual machine hardware version 8 or later

Answer: A

Question No : 8

At a minimum, which three Datastore permissions must be added to a vCenter Server role to work with View Composer? (Choose three.)

- A. Allocate Space
- B. Update Virtual Machine Files
- C. Browse Datastore
- D. Low Level File Operations
- E. Remove File

Answer: A,C,D

Question No : 9

An administrator has provisioned a web application to a group of users. Users have reported that the application is not visible in the Applications tab when the user launches Workspace Portal.

Which steps must the administrator take to ensure the application is entitled properly?

- A. Verify that the application is SAML-enabled.
Verify that the application is entitled to a directory service-based Workspace Portal group or user.
- B. Verify that the application is set to Automatic.
Verify that the application is entitled to a directory service-based Workspace Portal group or user.
- C. Verify that the application is set to User-Activated.
Verify that the application is entitled to a local Workspace Portal group or user.
- D. Verify that the Workspace Portal client is installed on the endpoint.
Verify that the application is entitled to a local Workspace Portal group or user.

Answer: B

Question No : 10

An administrator has completed upgrading the View pods in two datacenters to Horizon 6. To facilitate the new Continuity of Operations initiative, the administrator needs to implement global entitlements via the new Cloud Pod Architecture.

Which capability of the administrator's current environment is incompatible with Cloud Pod Architecture?

- A. Dedicated Full Clone Pools
- B. HTML Access
- C. ThinApp Entitlements
- D. Persona Management

Answer: B

Question No : 11

An administrator needs to increase the number of desktop resources in a dedicated assignment manual pool. This pool is made of unmanaged virtual machines.

What should the administrator do?

- A. Create additional virtual machines and add them to the pool as desktop sources.
- B. Edit the pool settings to increase the minimum number of desktops.
- C. Change the vCenter Server settings in the pool to Provision on demand.
- D. Increase the number of available replica virtual machines in View Composer.

Answer: A

Question No : 12

Dumps with PDF and VCE (+Free VCE Software)

While deploying a View desktop pool, an administrator determines that the virtual desktops remain at a status of Customizing.

In the debug-timestamp.txt log file of the View Agent, the administrator finds the error message:

Debug - Unable to connect to JMS

```
Server.com.vmware.vdi.agent.messageserver.Jmsmanager.a(SourceFile:238)  
javax.jms.JMSEException:Unable to create a connection to:[ServerEntry, hostname,  
port=4001]
```

What should the administrator do to troubleshoot the connection problem?

- A. Verify that the View Composer Guest Agent Server service is set Started on the virtual desktops.
- B. Verify that the View Agent can communicate with the View Connection Server over port 4001.
- C. Verify that the View Connection Server can resolve the DNS name of the vCenter Server.
- D. Verify that the View Security Server can establish a connection using the AJP13 protocol over port 4001.

Answer: B

Question No : 13

An administrator needs to create a full clone desktop pool and reduce storage costs by using the SEsparse disk feature. However, this option is not displayed in the Add Pool wizard.

What is the likely reason that the administrator is prevented from enabling this option?

- A. SEsparse disks can be used only with linked-clone desktop pools.
- B. SEsparse disks are not supported with NFS storage.
- C. SEsparse disks are not supported by the storage vendor.
- D. SEsparse disks must be configured using PowerCLI.

Answer: A

Question No : 14

An administrator is creating a new Floating Assignment Linked-Clone pool. The pool will contain approximately 30 virtual machines based on a parent virtual machine with a 12GB disk and 100GB datastore.

What is the lowest Storage Overcommit Level that will support this pool?

- A.** None
- B.** Conservative
- C.** Moderate
- D.** Aggressive

Answer: B

Question No : 15

An administrator needs to provide access to a View virtual desktop for users in Domain A and Domain B.

How should the administrator configure the domains and the View implementation?

- A.** Install a View Connection Server in a resource domain and create a one-way trust to both Domain A and Domain B.
- B.** Install a View Connection Server in Domain A and create a one-way trust to Domain B.
- C.** Install a View Connection Server in Domain A and create a two-way trust between Domain A and Domain B.
- D.** Install a View Connection Server in a resource domain and create a two-way transitive trust between Domain A and Domain B.

Answer: C

Question No : 16

Dumps with PDF and VCE (+Free VCE Software)

An administrator has installed View and needs to configure the PCoIP settings via a Group Policy Object (GPO).

What should the administrator do first?

- A. Create a GPO and apply the required policy settings.
- B. Add pcoip.adm to the Administrative Templates on a View Connection server.
- C. Link the GPO to the Organizational Unit (OU) that contains the virtual desktops.
- D. Add pcoip.adm to the Administrative Templates on an Active Directory server.

Answer: D

Question No : 17

An administrator is creating a new Automated Linked-Clone desktop pool. The administrator has also created a new parent virtual machine and has installed the View Agent.

Which additional step must be taken before the desktop is prepared for use in a Linked-Clone pool?

- A. Restart the virtual machine and clone to template.
- B. Power off the virtual machine and take a snapshot.
- C. Enable provisioning in View Administrator.
- D. Enable provisioning in View Composer.

Answer: B

Question No : 18

An administrator needs to backup the View LDAP Configuration and View Composer database.

What are three ways this can be accomplished? (Choose three.)

- A. Schedule automatic backups by using the View Manager Configuration Backup feature.

Dumps with PDF and VCE (+Free VCE Software)

- B.** Initiate a backup immediately by using the Backup Now feature in View Administrator.
- C.** Use a replicated instance of View Connection Server as the backup.
- D.** Take a snapshot of the View Connection server.
- E.** Manually export the View data by using the vdmexport utility.

Answer: A,B,E

Question No : 19

An administrator needs to prevent specific application-related setting files from being overwritten during a base layer update.

What should the administrator do?

- A.** Use Base Layer Override Policy to exclude application configuration files if they exist.
- B.** Use Upload Policy to exclude application configuration files in the User Area section of the policy.
- C.** Use Base Layer rules to exclude files from being deployed to workstations.
- D.** Use Upload Policy to exclude application configuration files in the Unprotected Area of the policy.

Answer: A

Question No : 20

An administrator is creating a pool of desktops for a group of developers. The administrator needs to provide control to a user from the group to manage the recompose and refresh operations. The user's controls must apply only to the developer pool.

What should the administrator do?

- A.** Create a developer folder, add the developer pool, and assign a user with the Inventory Administrators role to the folder.
- B.** Create the developer pool and assign the Manage Desktops global privilege to the virtual desktops.
- C.** Create the developer pool and assign the Inventory Control global privilege to the virtual desktops.

D. Create a developer folder, add the desktops, and assign a user with the Manage Desktops role to the folder.

Answer: A

Question No : 21

An administrator increases the number of virtual desktops in a desktop pool and finds that the provisioning task fails with an error. The error indicates that an Active Directory object already exists with the name of the virtual machine being created.

After reviewing the error, the administrator checks the inventory of the pool and finds that there are two virtual machines with the same name in the inventory list.

What is causing the issue?

A. The naming pattern configured for the pool has been modified since the pool was created.

B. The Computer Account in Active Directory was moved out of the Organization Unit in which it was created.

C. An existing virtual machine with the same name was moved out of the desktop pool folder in vCenter Server.

D. The Allow re-use of pre-existing computer accounts setting is selected in the pool settings.

Answer: C

Question No : 22

What should the administrator do first when configuring vCenter Operations Manager for Horizon to monitor their View deployment?

A. Add Adapter from the View Configuration > Servers page in View.

B. Add Adapter from the Custom Dashboard page > Configuration in vCenter Operations Manager.

C. Configure the Adapter from the Administration > Solutions page in vCenter Operations Manager.

D. Configure the Adapter from the View Configuration > Global Settings page in View.

Answer: C

Question No : 23

An administrator is installing View Connection server and stops at the Authorize a View Administrators account step.

Which user or group is the default suggestion at this stage?

- A.** The Domain Admins group
- B.** The local user performing the install
- C.** The local Administrators group
- D.** The domain user performing the install

Answer: D

Question No : 24

Several users within a corporation installed a team collaboration utility onto their Mirage-managed systems. The systems became erratic, so they uninstalled the application, but the problem remained.

An administrator needs to repair the users' systems and ensure they are compliant with the corporate image. All user profile data must remain intact.

What should the administrator do?

- A.** Revert to Snapshot with Restore System Only option selected.
- B.** Enforce All Layers with the Preserve user applications option selected.
- C.** Revert to Snapshot without Restore System Only option selected.
- D.** Enforce All Layers with the Remove user applications option selected.

Answer: D

Question No : 25

An administrator is preparing a Windows 7 virtual machine for View and is reviewing Windows services as part of the optimization process.

Which Windows service must the administrator ensure is started?

- A. Windows Firewall
- B. Disk Defragmenter
- C. Windows Defender
- D. Routing and Remote Access

Answer: A

Question No : 26

An administrator is planning a Floating Linked-Clone desktop pool using local solid state drives. A stateless configuration is suitable for this group of users.

Local solid state drive capacity is limited. The administrator plans to use the storage tiering capabilities of View Composer to place the Linked-Clones on shared storage and place only the Replica on local disk.

Why will the administrator be prevented from using this configuration?

- A. Storage tiering is supported only when using Full Clone desktops.
- B. Replica and Linked-Clone disks must reside on the same datastore when using local disks.
- C. Replica disks must always reside on shared storage for Linked-Clone pools.
- D. Storage tiering is supported only for Dedicated Assignment Linked-Clone desktops.

Answer: B

Question No : 27

If an application depends on explorer.exe, which option ensures the application will open inside of a RDS application pool?

- A. Set runonce.exe to execute at login with a GPO.
- B. Configure the application to run as Local System.
- C. Package the application with VMware ThinApp.
- D. Disable User Access Control on the server.

Answer: A

Question No : 28

An organization's ThinApp packaged applications are being delivered to both physical and virtual desktops using a login script.

The administrator has implemented Workspace Portal across the organization. Instead of using login scripts, the administrator needs to provide the applications to users from the Workspace Portal application catalog.

Which ThinApp utility and parameter should the administrator use?

- A. relink.exe -a
- B. vregtool.exe -h
- C. vregtool.exe -a
- D. relink.exe -h

Answer: D

Question No : 29

An administrator needs to set up SSL certificates that are signed by a third-party Certificate Authority for the View Connection and security servers.

Which two configuration steps must the administrator complete? (Choose two.)

- A. Modify the certificate friendly name to vdm.
- B. Run the sviconfig ReplaceCertificate utility to bind the new certificate.
- C. Modify the certificate friendly name to view.
- D. Import the SSL certificate into the Windows local system certificate store on the View servers.

Answer: A,D

Question No : 30

An administrator has installed a View security server and needs to verify that the installation was successful.

In addition to the security server, which three services should be installed? (Choose three.)

- A. VMware View Framework
- B. VMware View Security Framework
- C. VMware View PCoIP Secure Gateway
- D. VMware View Security Gateway
- E. VMware View Framework Gateway

Answer: A,C,D

Question No : 31

An administrator is planning the capture of a reference machine for two departments: Finance and Information Technology.

Which two applications should the administrator include in the common base layer? (Choose two.)

- A. Finance Accounting Application
- B. Anti-Virus software
- C. Admin Script Editor

D. VPN Software

Answer: B,D

Question No : 32

An administrator is attempting to configure a new linked-clone pool to use software 3D rendering and notices that the 3D Renderer option is unavailable.

The pool settings are as follows:

- ✍ Default display protocol is set to PCoIP.
- ✍ Allow users to choose protocol is set to Yes.
- ✍ Max resolution of any one monitor is set to 1920 x 1200.
- ✍ Max number of monitors is set to 2.

Which setting change should the administrator make to allow the 3D Renderer to be enabled?

- A.** Change the Default display protocol setting to RDP.
- B.** Change the Allow users to choose protocol setting to No.
- C.** Change the Max resolution of any one monitor setting to 2560 x 1600.
- D.** Change the Max number of monitors setting to 1.

Answer: B

Question No : 33

A recompose operation on a linked-clone pool has failed. An error on the pool indicates the Computer Account in Active Directory is missing, but a search for the account in Active Directory verifies that it is present.

What condition would cause this error in View?

- A.** The Computer Account has been moved out of the Organizational Unit in which it was created.
- B.** The Quickprep domain user account has been moved to a different Organizational Unit.

- C. A new GPO has been applied to the Computer Account.
- D. The Quickprep domain user account does not have the Administrator role in View Administrator.

Answer: A

Question No : 34

Several users spanning multiple Active Directory groups have been assigned to a special project and need access to a set of applications.

An administrator needs to create a group to manage these users in Workspace Portal but does not have access to Active Directory to create a new group there.

What should the administrator do?

- A. Edit the Directory Sync rules to create a filter group.
- B. Create a new Connector virtual appliance and sync only the selected users.
- C. Create a group in Workspace Portal and assign the users to this group.
- D. Create a group in the Configurator virtual appliance console and add the users to this group.

Answer: C

Question No : 35

An organization has a View deployment with a Dedicated Full Clone Pool of Windows 7 desktops. Users connect to the desktops using a Zero Client with firmware 4.1.2. Periodically, the desktops display a black screen after inactivity or after they go to sleep mode. The View Connection Manager indicates the desktops are Connected.

An administrator finds the following PCoIP log messages:

<Date, Time> LVL:0 RC:0 SERVER==> WindowProC.Detected WM_DISPLAYCHANGE event (1900x1200)

and

<Date,Time>LVL:2 RC.0 IMG_FRONTEND:DisplayDevice[0] states -
DISPLAY_DEVICE_ATTACHED_TO_DESKTOP DISPLAY_DEVICE_ACTIVE

What should the administrator do to resolve the issue?

- A. Configure the virtual desktop power management option Turn Off Display to Never.
- B. Configure the virtual desktop power management option Sleep to Never.
- C. Configure the virtual desktop power management option Turn Off Hard Disk to Never.
- D. Configure the virtual desktop power management option PCI Express Link State Power Management to Off.

Answer: A

Question No : 36

An administrator needs to configure a user for View Composer to add computers to the domain. Company policy restricts the administrator account from being used.

Which three non-default permissions must be added to the account to accomplish this?
(Choose three.)

- A. Delete Computer Objects
- B. Create Computer Objects
- C. List Contents
- D. Write All Properties
- E. Read Permissions

Answer: A,B,D

Question No : 37

An administrator is attempting to create a Windows 8 full clone desktop pool. The View Agent has been installed and a snapshot has been taken. However, the virtual machine is not listed during the Add Pool wizard.
