Exam Code: 920-261

Exam Name: Nortel Application Switch Rls.24.x

Configuration & Admin

Vendor: Nortel

Version: DEMO

Part: A

1: In order to create a BWM (Bandwidth Management) policy you must assign a policy number, specify limits (reservation limit, soft limit, hard limit), and which of the following?

A.Specify a buffer limit.

B.Associate a new IP address with the necessary VLAN.

C.Map IP addresses in a sufficient range.

D.Create a table entry.

Correct Answers: A

2: What is an advantage of a bandwidth management policy?

A.It creates a health check on the available bandwidth.

B.It creates a set of rules that determines the limits and packet precedence.

C.It collects rules that assign the traffic specified to a certain port.

D.It assigns the total amount of bandwidth that gets through the switch.

Correct Answers: B

3: To manage bandwidth, a bandwidth management contract is created. Which two parameters must the contract include? (Choose two.)

A.blocking guidelines for unexpected or unwanted users

B.a classification policy where frames are grouped together

C.a key that allows for emergency expansion of bandwidth limits

D.a policy that specifies a set of bandwidth usage limitations to apply to the frames

Correct Answers: B D

4: Which three settings help you to determine whether or not you can apply a specific contract to the Nortel Application Switch? (Choose three.)

A.Bandwidth management is enabled.

B.Healthchecks are monitoring traffic flow.

C.A relevant classification is associated with that switch.

D.The Application Switch is acting as a "core" Layer 2 device.

E.The sum of all your CIRs does not exceed the bandwidth available.

Correct Answers: A C E

5: What does a Virtual Server Router (VSR) provide redundancy for?

A.VIR

B.VIP

C.NAT

D.GSLB

Correct Answers: B

6: Which two parameters must be configured the same on all switches for a given VIR?

A.VRID and Priority for the VIR

B.Priority and Interface IP address for the VIR

C.IP address and VRID for the VIR

D.VRID and Interface IP address for the VIR subnet

Correct Answers: C

7: Which is true when sharing is enabled for a Virtual Server Routers (VSR)?

A.Client/server processing takes place on both switches.

B.Server processing operates in round-robin mode between the switches.

C.All client/server processing is forced to the master switch.

D.Sessions are synchronized between both switches.

Correct Answers: A

8: Which of the following is a valid VRRP tracking parameter?

A.Ports

B.SNMP

C.OSPF

D.VRID

Correct Answers: A

9: In which circumstance will a backup switch become the primary switch?

A.when it ceases to receive advertisements from the primary switch

B.after a successful bid to become the primary switch

C.when forced via the /oper/vrrp/master command

D.after receiving an advertisement with a lower preemption than its own

Correct Answers: A

10: After a Virtual Server Routers (VSR) has been created, which action can only be done by the master?

A.host a telnet session

B.respond to ARP requests

C.keep track of available real servers

D.process packets destined for the VIP

Correct Answers: B

11: In standard FWLB, each switch checks the health of the interfaces of the opposing switch. Which statement is true?

A.Each switch automatically selects and adds the required static routes.

B.Filters must be specified to allow for periodic access beyond the local firewall.

C.The firewall must occasionally be shut down to allow contact with other interfaces.

D.Static routes must be added to direct health checks through the proper firewall and to the other side.

Correct Answers: D

12: Standard server load balancing uses the source IP address, WCR uses the destination IP address.   What does the FWLB use to determine distribution and ensure consistency?

A.source IP address only

B.source port number only

C.source and destination IP address

D.source and destination port number

Correct Answers: C

13: What happens to a FWLB redir filter if all real servers for the group fail their healthchecks?

A.The filter becomes a deny filter.

B.The filter becomes an allow filter.

C.The filter is ignored and traffic is dealt with by the next matching filter.

D.The backup action specified in the advanced filter menu is used, instead of redirection.

Correct Answers: A

14: Which statement is true when a session is created by a packet entering an RTS enabled port?

A.The session has a default age of 6 minutes.

B.The session has a default age of 8 minutes.

C.The RTS sessions statistic increments by one.

D.The destination IP of the packet is the source IP of the session.

Correct Answers: D

15: When does the Nortel Application Switch make the load balancing decision while using an Immediate binding?

A.after the TCP SYN/ACK

B.upon receipt of the TCP SYN

C.upon receipt of the TCP GET

D.after the three way handshake

Correct Answers:
