

Vendor: SAP

Exam Code: C_TADM51_70

Exam Name: SAP Certified Technology Associate -
System Administration (Oracle DB) with SAP NetWeaver
7.0

Version: DEMO

1. Control of the SYSDBA and SYSOPER system privilege is totally outside the database itself.

- A. True
- B. False

Answer: A

2. When the R13 update task aborts with an Oracle error ORA1653 - failure to allocate an extent for a table in a specific tablespace - what action needs to be taken?

- A. The tablespace should be reorganized.
- B. The tablespace size should be increased by adding a new data file.
- C. The table should be reorganized.
- D. The storage parameter MAXEXTENTS must be increased.
- E. After the cause of the error has been removed, the R13 update task must be reactivated.

Answer: B, E

3. Name the standard Database users created in Oracle. Note! More than one answer is correct. Please click on the buttons next to the correct answers

- A. SIDADM
- B. ORASID
- C. SYS
- D. SAP<SCHEMA-ID>
- E. SYSTEM

Answer: C, E

4. Which files must be restored from tape to allow a full database restore and recovery?

- A. Database control file, tablespace data files, and the database alert log.
- B. Tablespace data files, database control file, and all archived database transaction logs created since the last full backup.
- C. \$ORACLE_HOME, Oracle parameter file, tablespace data files.
- D. Database control file, tablespace data files, R13 Syslog, R13 Transport directory.
- E. Oracle parameter file, tablespace data files, and the Oracle control file.

Answer: B

5. Which of the following parameters influences the behavior of the Oracle cost based optimizer

- A. TUNE_OPTIMIZER
- B. OPTIMIZER MODE
- C. CBO_ULTRA_WARP
- D. DB_FILE_MULTIBLOCK_READ_COUNT
- E. dba/ora/use_hint

Answer: B, D, E

6. The SAP installation creates just one additional role called _____.

A. SAPDBA

Answer: A

7. What is the purpose of the Oracle ° OPS\$connect authorization function?

- A. OPS\$connect authorization allows an operating system user to connect to the database without being prompted for a password.
- B. OPS\$connect is an Oracle command enabling whoever executes it to administer the database without using sql*plus.
- C. OPS\$connect is used in Oracle Parallel Server installations to enable remote database connections over a LAN.
- D. OPS\$connect authorization is required of all database users and is required for connection to the database.
- E. OPS\$connect enables the R13 System saposcol process to communicate and exchange data with the database.

Answer: A

8. The Oracle tool to test the connection to the database with SID C11 ON HOST twdf0505 is Click on the button next to the right answer.

- A. TNSLISTENER
- B. lsnrctl start
- C. tnspingC11
- D. CONNECT
- E. BRCONNECT

Answer: C

9. An Instance error occurs when 1 or more Oracle background processes become corrupted. What actions should the database administrator take to correct the problem?

- A. This is a serious error. Call the Oracle hotline.
- B. Shutdown the operating system and reinstall the Oracle software.
- C. Shutdown abort and startup open. The SMON process will use the current redo log files and checkpoint information from the control files to execute an automatic instance recovery upon database startup.
- D. Shutdown the operating system and turn all hardware off. After the hardware cools off start everything up again and execute Oraintst using the repair option.
- E. Restore all missing files, apply the offline redo logs, update the control files, and execute the startup open command.

Answer: C

10. Which of the following user types can be used for dialog free communication within the system?

- A. Dialog
- B. System
- C. Service
- D. Communication

E. Reference

Answer: B, D

11. Which of the following is true for the SQL statement highlighted on the Shared SQL screen? Please choose the correct answer.

- A. The statement is an expensive statement, because it is on top of the list.
- B. The statement is an expensive statement, because it shows more than one million buffer gets.
- C. The statement is an expensive statement, because the buffer gets in this statement exceed 5% of the total buffer gets (reads) in this system.
- D. The statement is an expensive statement, because the buffer gets in this statement exceed 5% of the physical reads (disk reads) in this system.
- E. The statement is not an expensive statement.

Answer: C

12. Mention two (2) OS users created each in UNIX and windows platform during the installation of SAP on Oracle.

- A. Windows: adm and SAPService UNIX: ora and adm

Answer: A

13. The SYSDBA and SYSOPER system privilege allow access to a database instance when the database is not open.

- A. True
- B. False

Answer: A

14. Which statement is true of online Oracle database backups?

- A. Users may only read data and may not enter data until after the backup is done.
- B. Database transaction logs (online redo logs) are not written during online backups.
- C. The tablespace data files and control file comprise the complete online backup and are all that is necessary for restoring the database to a consistent status.
- D. The database must be running in archive log mode.
- E. Online database backups are not supported by Oracle.

Answer: D
