

**Exam Code:** HP0-678

**Exam Name:** Implementing HP Enterprise Virtual Array  
Solutions

**Vendor:** HP

**Version:** DEMO

## **Part: A**

1: The battery status indicator on the EVA controller is off. What does this indicate?

- A.The battery is faulty.
- B.The battery is sufficiently charged.
- C.The battery is less than 50% charged.
- D.The battery has reached its expiration date.

**Correct Answers: B**

2: An EVA controller failed suddenly. You have to troubleshoot the failure. Where will you be able to find the event code for the controller that failed?

- A.Windows NT Log
- B.Controller Event Log
- C.Management Agent Event Log
- D.Controller Termination Event Log

**Correct Answers: D**

3: A blower has failed on a disk enclosure on an EVA4000. Which actions should be taken to repair the condition?

- A.Order replacement blower. Replace the failed blower when the replacement blower arrives on site.
- B.Remove the failed blower immediately. Order a replacement blower and install the replacement blower once it arrives on site.
- C.Order the replacement blower. Shut the disk enclosure down when the replacement blower arrives on site and install the replacement blower.
- D.Order the replacement blower. Remove the failed blower when the replacement blower arrives on site.Wait 30 minutes to ensure the removal is detected by the EMU and then install the replacement blower.

**Correct Answers: A**

4: What does the Storage System Scripting Utility (SSSU) command capture configuration create?

- A.one to five SSSU scripts that enable it to recreate the original configuration including snapshots
- B.one to five SSSU scripts that enable it to recreate the original configuration except for snapshots
- C.a topology map and an ASCII file that summarizes the current storage system configuration
- D.one to five text files which must be converted, linked, and validated with the command capture validate in order to use them as recovery scripts

**Correct Answers: B**

5: What is the requirement for path names when using the Storage System Scripting Utility (SSSU)?

- A.must be full path names
- B.can be abbreviated path names
- C.must be upper case path names
- D.path names can be defined by an alias

E.path names must include the EVA cell name

**Correct Answers: A**

6: For EVAPerf to run correctly, where must its configuration files be placed?

A.any local host

B.the top level directory

C.any management server

D.the installation directory

**Correct Answers: D**

7: Which authentication scheme is used to access Command View EVA on a ProLiant server?

A.radius authentication

B.operating system authentication

C.MD5 Message Digest authentication

D.dedicated Command View EVA authentication

**Correct Answers: B**

8: The Command View EVAPerf enables you to monitor and display what EVA performance metrics? (Select three.)

A.Vraid level data

B.replication data

C.virtual disk data

D.port status data

E.quorum disk data

F.controller cache data

**Correct Answers: B C D**

9: How does the management server communicate with the HSV controller?

A.using SCSI tagged command queueing commands

B.using Fibre Channel Arbitrated Loop (FC-AL) commands

C.using Storage Management Appliance (SMA) commands

D.using Storage Cell Management Interface (SCMI) commands

**Correct Answers: D**

10: What URL do you enter to access Command View EVA from a remote management server web browser?

A.https://hostname/command\_view\_eva

B.http://localhost:7902/command\_view\_eva

C.https://hostname:2381/command\_view\_eva

D.http://hostname:5314/command\_view\_eva

**Correct Answers: C**
