Exam Code: HP0-D06

Exam Name: Implementing HP Converged Infrastructure

Solutions

Vendor: HP

**Version:** DEMO

1: Drop

Indicate the components with which a logical server can be associated.

Components

virtual machine	place here
application	place here
network component	place here
BladeSystem	place here
ProLiant ML/DL server	place here

Done

Answers

associated

not associated

Correct Answers:

Indicate the components with which a logical server can be associated.

Components

virtual machine	associated
application	not associated
network component	not associated
BladeSystem	associated
ProLiant ML/DL server	not associated

Answers

Done

2: A customer has a Central Management Server (CMS) running Insight Manager 7. What must be done to proceed with the installation of HP Insight Dynamics - VSE?

A.Upgrade to Rapid Deployment Pack 3.7 or later.

B.Install Virtual Connect Enterprise Manager (VCEM).

C.Upgrade the server to HP Systems Insight Manager 5.3 or later

D.Nothing more needs to be done. The installation can proceed without modification.

Correct Answers: C

3: What must you do to prepare the ports before stacking Virtual Connect Ethernet Modules?

A.You must define the root port.

B.You must designate a port as a stacking port.

C.You must define upstream and downstream neighbors.

D.You do not need to do anything because configuration is automatic.

Correct Answers: D

4: Which statement is true about full virtualization?

A.It can be implemented completely only by using virtualization software.

B.It can be implemented only by using virtualization software with HP Integrity VT processor assistance.

C.It can be implemented completely either with virtualization software or with processor virtualization assistance (AMD-V, Intel VT-x).

D.It is implemented in most operating systems at a basic level and special features require

virtualization software assistance.
Correct Answers: C

5: Which key components are used to build a Virtual Connect infrastructure? (Select three.)
A.Virtual Connect Supervisor
B.Virtual Connect Ethernet modules
C.Virtual Connect Pass Thru modules
D.Virtual Connect Manager
E.Virtual Connect Switch Manager
F.Virtual Connect Fibre Channel modules
Correct Answers: B D F

7: What must be done in order to configure Virtual Connect and enclosure bay IP addressing (EBIPA) correctly? (Select two.)
A.The Onboard Administrator and all Virtual Connect modules must be in the same IP subnet.
B.The Onboard Administrator must be in an IP subnet different from that where all Virtual Connect modules reside.
C.Virtual Connect Ethernet modules and Virtual Connect Fibre Channel modules must be in different IP subnets.
D.The Onboard Administrator IP address must be set properly before changing the IP addresses of the Virtual Connect modules.
E.The IP addresses of the Virtual Connect modules must be set properly before changing the Onboard Administrator IP address.
Correct Answers: A D

8: How many c-class enclosures are manageable when running HP Virtual Connect Enterprise Manager 1.30 or later?
A.100
B.200
C.400
D.800
Correct Answers: D

9: How many c-class enclosures are manageable by one Virtual Connect domain when running HP Virtual Connect Enterprise Manager 1.30 or later?
A.1
B.2
C.4
D.8
Correct Answers: C

10: How many c-class enclosures are manageable by one Virtual Connect domain when running HP Virtual Connect Enterprise Manager 1.30 or later?

A.HP Server Management GUI

B.Server Management and Scripting Utility

C.command line interface for local or serial access

D.browser-based GUI

E.command line interface for network access

Correct Answers: D E
