D. Select event, click Reopen button, select the Annotations tab, click the New Item asterisk icon to add an annotation, type in the information, click Ok.
Answer: A

3.What do event assignment rules enable you to do?
A. send events to connected servers, based on event filters
B. directly assign specific incoming event types to individual users
C. automate user group ownership for events matching a filter
D. configure the assignment of events to CIs and Event Type Indicators
Answer: C

4.The OMi integration with Service Manager uses a Groovy Script Adapter as its integration type. When configuring this connection, what needs to be edited in the Groovy script that is supplied by OMi?
A. Fully Qualified Domain Name of the Service Manager server
B. User credentials for a Service Manager user with administrative permissions
C. Web tier details in the DRILLDOWN_ROOT_PATH variable
D. Fully Qualified Domain Name of the HP BSM data processing server
Answer: C

5.How does OMi determine which events to automatically forward to other connected servers?
A. It specifies a list of CIs. Any events that are related to a CI in the list are forwarded.
B. The administrator defines Event Fowarding Rules, which are defined with an event filter. Any events
that match the filter are forwarded.
C. OMi automatically forwards the Cause events that are correlated using TBEC rules.

D. It specifies a list of CI types. Any events that are related to a CI of a type that is in the list are forwarded.

Answer: B

6.What is used to unify comparable events from different sources?

A. ETI

B. HI

C. CI Resolver hint

D. OM events

Answer: A

7.Which statement is true about configuring custom actions? (Select two.)

A. You can modify message contents to increase usability.

B. You can run actions against a customizable set of CIs.

C. An operator can perform individual parameterizations of actions.

D. Any kind of batch, executable and URL action can be chosen.

E. The provided Groovy script will perform the requested action.

Answer: A,E

8.What must you do when deploying HP BSM servers?

A. Use the Server and Database Configuration utility to establish connectivity between the server and the databases.

B. Establish client-server communication between BSM servers.

C. Point the BSM data collector applications (BPM, SiteScope, etc.) to the event server.

D. Ensure that each server has a read access account to the database servers.

Answer: A

9.What is the primary tool used to determine the scope, size, and recommended installation of a specified HP BSM deployment?

A. Capacity Calculator

B. Deployment Configuration Calculator

C. Machine Requirements Calculator

D. OMi Installation Guide

Answer: A

10.HP BSM management servers can be installed on which operating systems? (Select two.)

A. HP-UX 11.11

B. HP-UX 11.23

C. Solaris 10

D. IBM AIX

E. Windows 2003 Server/Enterprise R2

F. Windows 2008 Server/Enterprise R2

Answer: E,F
