

Vendor: HP

Exam Code: HP2-K21

Exam Name: Designing HP Enterprise Storage Solutions - Delta

Version: Demo

QUESTION 1

Your customer is looking to implement replication between three D2D devices. Which statement is true about licensing the replication functionality of the D2D?

- A. A replication license is required for both the source and the target devices.
- B. A replication license is required for the target devices.
- C. Replication functionality is included as part of the base firmware and is not licensed.
- D. A replication license is only required for the source device.

Correct Answer: B

QUESTION 2

Your customer has two D2D2501 devices each with a single VTL configured and a D2D4112 with two VTLs configured, each replicating to a D2D4312. How many replication licenses are required for this design?

- A. 1 license
- B. 2 licenses
- C. 3 licenses
- D. 4 licenses

Correct Answer: A

QUESTION 3

Which statement is true about using Performance Advisor to gather P9500 performance data?

- A. One collection schedule can be created per array.
- B. Two collection schedule scan be created per array.
- C. Three collection schedules can be created per array.
- D. Four collection schedules can be created per array.

Correct Answer: A

QUESTION 4

The StorageWorks P4000 SAN Architecture consists of three basic layers. Which function or component is contained in the OS infrastructure layer?

- A. Security Services
- B. Centralized Management Console
- C. Windows Solution Pack
- D. P4000 VSA

Correct Answer: C

QUESTION 5

Which statement is true about iSCSI clusters when implementing on a P4000?

- A. It can only span one subnet.
- B. It can only span two subnets.
- C. It can only span three subnets.
- D. It can only span four subnets.

Correct Answer: B

QUESTION 6

Which P4000 features does a Multi-site SAN offer that a Campus SAN does not? (Select two.)

- A. Mutli-subnet clusters
- B. Centralized licensing
- C. I/O preferencing based on site
- D. Auto failover and failback
- E. SAN/iQ Failover Manager

Correct Answer: AD

QUESTION 7

On the X1000 and X3000 Network Storage Systems, which standard feature of Windows 2008 Optimizes storage capacity by actively comparing and eliminating identical files on file sharing volumes?

- A. dynamic deduplication
- B. StoreOnce
- C. accelerated deduplication
- D. Single Instance Storage

Correct Answer: D

QUESTION 8

Autonomic tiering provides a self-optimizing capability for which HP array?

- A. HP EVA
- B. HP 3PAR

- C. HP P4000
- D. HP P9000

Correct Answer: B

QUESTION 9

Your customer is considering the HP 3PAR range of arrays and is concerned about resilience. Which feature provides increased resiliency?

- A. write-thru cache
- B. disk-dependent RAID
- C. dynamic optimization
- D. many-to-many drive rebuild

Correct Answer: D

QUESTION 10

The HP 3PAR architecture is capable of parallel processing of data and control information. What does this help provide?

- A. QoS tagging of all 10 requests
- B. I/O prioritization
- C. application aware I/O processing
- D. consistent performance for mixed workloads

Correct Answer: D

EnsurePass.com Members Features:

1. Verified Answers researched by industry experts.
2. Q&As are downloadable in PDF and VCE format.
3. 98% success Guarantee and **Money Back** Guarantee.
4. Free updates for **180** Days.
5. **Instant Access to download the Items**
